Follow them in Social media: FACEBOOK: Retrieved 2014-03-25. Author: Hari Balakrishnan Categories: File size: 73.3 MB The image used for the logo indicates fake goods. Category: Pics:1 News: Toyota and Hyundai are reportedly planning to invest an additional $6 billion for R&D for self-driving technology. The two companies are taking the lead of Samsung and Intel by investing billions of dollars on R&D, which is expected to lead to a new wave of R&D in the automotive industry. Such a move would provide a significant technological advantage as the auto and IT industries are highly competitive. The image used for the logo indicates fake goods. Don't know where to post this, but since this is about the Apple Watch, this topic is the most appropriate. Though Apple has become an all-in-one solution provider and can even set the pace for other business start-ups, the current Apple Watch development is focused mainly on the outside. The company is developing its next-generation Apple Watch and not an all-around wearable gadget. A recent report on the Apple Watch states that the wearable gadget will be equipped with several new features, including NFC technology, built-in Health app and a new low-power chip which will provide a better experience. Based on the analysis of external parts (power source) and internal components (processor, RAM), we can conclude that the Apple Watch's new low-power chip is in fact a complete processor. However, it will perform all tasks that the Apple Watch has to handle. Additionally, reports on the Apple Watch reveal that it will be equipped with NFC technology, both through the hardware and application. The Apple Watch will be able to read NFC tags both locally and virtually. That means the user will not only be able to pay for things without a device, but he or she will be able to receive calls and messages, make purchases, d4474df7b8
