

Are you currently experiencing troubles with your bb5 Nokia phone? Want to get the most out of the device on your own without paying a hefty fee for someone else to do it? In this article, we'll show you how to use an infinity box service tool that makes bb5 Nokia phone fixes a breeze. Start by downloading and installing the program from this link. Start by downloading and installing the program from this link: [http://www.instructables.com/file/RDUKKBZJFK7VOO0XSZU4NJI/7utm\\_source=instructables&utm\\_medium=sig-email&utm\\_campaign=stc](http://www.instructables.com/file/RDUKKBZJFK7VOO0XSZU4NJI/7utm_source=instructables&utm_medium=sig-email&utm_campaign=stc). Click on the "Infinity Box" application. It should start up and you'll be prompted to enter the IMEI and model of your phone. If not, make sure you check your settings. Once these are entered, the Infinity box tool will ask you how much data you have remaining on your phone. This is completely optional but many people recommend it so that everything will work properly with the tool. The default setting is for unlimited data, which is fine for most users, but if it runs out during a fix, you'll receive an error message. To change this to a lower amount, just click the "Change Data Plan" button to choose a lower amount of data by using these instructions. Select a country before you click next. This is also optional but many users from other countries have had more success with the tool. If you're from the US, UK, Switzerland, or South Korea, then it's recommended that you select those countries as those are the only ones that work as of right now. Next, you'll need to enter your phone's IMEI number and model number. Now click "Next" and perform a soft reset on your device by pressing and holding both volume keys at the same time until the device restarts normally. Now you'll be prompted to choose a language to use for setting up your account on this site. If not, select "English". Then you'll be prompted to enter your email address and password to use on this site. You can choose to use your Google account or not, but many people suggest using your personal email address for this. Next you'll need to provide the correct phone model (Nokia BB5 EASY-SERVICE) and then set up your device before clicking next. You should now get the normal screen that tells you that "Your Software Version is" followed by "-029", "-031", etc... If not, try restarting the program using the above steps. Next you'll be prompted "Invalid IMEI Number, Contact your Carrier". This usually means that your phone's IMEI number entered is incorrect. If not, try restarting the program using the above steps. You'll then see a warning that tells you to double click on a link in order to derive a software version number, and then double click on this link once it appears. You'll be asked to enter your carrier settings, which is really just a way for the program to tell the carrier website exactly what model you have based on the IMEI number it receives from you.
