Virtual DJ 7 is not compatible with iTunes v12 on Mac. You either need to downgrade iTunes or upgrade to VDJ8. Posted on Thu 23 Oct 14 @ . As it turns out, in iTunes 12.0.2 (iTunes 12), released this week, Apple removed support for the popular Virtual DJ audio equalizer. This means that if you purchase a version of Virtual DJ 7 that is not compatible with iTunes v12, you may not be able to use Virtual DJ 7 in iTunes v12. This is quite annoying as version 7 is one of the most popular versions of the product. However, according to our readers, this issue is fairly easy to fix. fffad4f19a
