If you do not agree to the terms, you should stop using the software. License Agreement NUMERICAL PROJECT DESCRIPTION: COMPUTER CONSTRUCTION AND DESIGN: PROGRAMMING: What is KEYMACRO? Number List Generator is a small software application developed specifically for helping you generate list with numbers. It can be deployed on all Windows versions out there. Requires no installation You do not have to go through an installation process in order to gain access to the tool's GUI because a simple double-click on the executable file does the job. Plus, you may run it without administrative privileges and open it directly from the storage device. It is important to mention that the utility does not leave entries in your Windows registry so you may get rid of it with a simple deletion task of the EXE file that you have downloaded from the Internet. You can also copy the utility on pen drives or other portable devices so you can carry it with you all the time. Clean and simple design Number List Generator reveals an easy-to-decode layout that allows you to set up the dedicated parameters in a short amount of time. All configuration parameters are integrated into a single window. You cannot find a help manual included in the package to read more about the setup process, but you can manage to generate lists with numbers on your own. Create list with numbers The application offers you the possibility to build up lists with numbers using four processing modes, namely 'Ordered,' 'Reversed,' 'Shuffled,' and 'Random.' What's more, you are are allowed to count from a certain number up to a custom one, set up the maximum value, as well as enter a prefix and suffix. The generated information can be copied to the clipboard so you can quickly paste it into other third-party utilities and exported to 45cee15e9a
