And lots of other tech topics and randomness in between. This blog is sponsored by Motorola Solutions, Inc. They provide the Dashboard and Radios which i test on the blog. They also provided a Dashboard and Radio to me in exchange for an unbiased review. As always this review is my honest opinion of the product.Q: Creating generic subnets in AWS I have to create several subnets in AWS. I need to know which are the available options to create a subnet and the most suitable one. More specifically, I need to create a subnet (within a VPC) that contains 4 CIDR IPs and use these subnets to create a load balancer in another VPC. When I create an instance on the load balancer (LB) I need to be sure that the IPs of the instances are in the subnet that was created for the LB. I don't want to create more than 4 subnets in the same time. At the moment I'm trying to create a subnet with 4 IPs in the following way: public static void main(String[] args) throws Exception { InstanceConfiguration config = new InstanceConfiguration(); config.setSubnetId("subnet-id"); config.setImageId("ami-id"); config.setKeyName("lbkey"); config.setSecurityGroupIds(Arrays.asList("sg-id-1", "sg-id-2")); config.setOwnerId("123"); config.setInstanceType("m4.large"); config.setPlacement(new Placement()); config.setSuspended(false); config.setLaunchTime(0); config.setSpotPrice(0.0f); config.setSpotMinutes(0); config.setPrice(0.0f); config.setCreateTime(0); config.setIamInstanceProfile("default"); config.setOwnerAlias("123"); config.setIpv6CidrBlockAssociation(false); config.setAssociatePublicIpAddress(false
