nocd I have previously generated a
script and I have changed a lot from
their generator. But the problem is I
don't know how to filter these results. I
wish to have something that looks like
this: [{ 'Severity': 'New', 'Minutes': '1',
'Domain': 'hi.com', 'IP_Address': '9',
'Filename': 'hihc-20190318.txt',
'User_Agent': 'Mozilla/5.0 (Windows
NT 10.0; Win64; x64)
AppleWebKit/537.36 (KHTML, like
Gecko) Chrome/42.0.2311.152
Safari/537.36' }]

How do I filter these
results to just get the domain and ip

address of these IP's? A: import requests import json def ban_ips(ips): l = [] req = requests.get(".format(ips)) if req.status_code == 200: json_data = json.loads(req.text) for t in json_data['data']: l.append({'Severity': t['flag'], 'Minutes': t['value'], 'IP': t['ip'], 'IP_Address': t['ip']}) return l def get_ips(tuple): req = requests.get(".format(tuple)) if req.status_code == 200: json_data = json.loads(req.text) for t in json_data['data']: ba244e880a
