We investigate the effects of nonuniformity on the two-impurity Kondo model in the heavy-fermion regime. We show that such a model has a universal entanglement entropy as a function of the system parameters.

Moreover, it exhibits a temperature entropy that is linear in the applied magnetic field and proportional to the spin susceptibility of the conduction electrons. The universal Kondo lattice model is

Barcodes can be printed onto paper and/or other substrates (e.g. for product labels or mailer addresses), barcodes can be printed directly onto a surface or other object (e.g. printed on a vehicle license plate), and barcodes can be embedded into paper (e.g. to identify a particular bank note).
