Frisky Ferals: Kasper & Nika 2.Q: WSO2 WSF/BES Application Testing Framework in Salesforce I have recently been asked to create an Application Testing Framework for WSO2 WSF/BES. I have not yet worked with Salesforce but I can imagine this will be a nightmare to implement. Is there anyone out there that has done this before and is willing to share their knowledge? A: You will have to use the API to access your org. There is no way to do this through web browser. API Documentation On this day in history: August 4, 1884 – U.S. Life-Saving Service founded On this day in history: August 4, 1884 – U.S. Life-Saving Service founded 1) On this day in history August 4, 1884 the U.S. Life-Saving Service was established by Secretary of the Navy George E. Bancroft. It was a direct result of his successful 1881 organization of the U.S. Navy's first "raft service" and the 1882 appointment of the U.S. Life-Saving Service to operate as the Navy's service as well. The new service, staffed by trained mechanics and other personnel, was assigned to rescue ships lost or taking on water off the coasts of the U.S. and Canada, and was authorized to store equipment on land at marine stations. The service was organized under the Department of the Navy and worked with similar agencies in Canada, Great Britain and Germany. It received, in 1883, the use of the steamers Sea Eagle, Raven and the Norwegian Prince Albert; the following year it added the steamer Galena and the British steamer Warrington, both of which were converted. The three vessels were used off both coasts of the United States. An assistant superintendent and three subordinate officers were assigned to each vessel. The service also operated a storehouse at the Marine Hospital at the Brooklyn Navy Yard. Life-saving apparatus included primitive lifesaving devices such as life preservers, ladders and buckets. On this day in history August 4, 1884 the U.S. Life-Saving Service was established by Secretary of the Navy George E. Bancroft. It was a direct result of his successful 1881 organization of the U.S. Navy ♦

Evidence for an Fc gamma receptor on basophils. Previous studies in our laboratory have indicated that human basophils bind human IgG but not IgE in vitro. The present study was undertaken to determine the cell-surface receptors that recognize IgG on human basophils. Binding of ¹²⁵I-labeled human IgG to whole blood cells was inhibited by unlabeled purified IgG and F(ab')₂ fragments of IgG. Cross-linking of IgG receptors by F(ab')₂ fragments of IgG, but not of IgE, was also demonstrated by electron microscopic examination of human basophils incubated with anti-IgG F(ab')₂ fragments and then reacted with

ferritin-conjugated rabbit anti-human IgG F(ab')₂ fragments. Basophils stimulated by anti-IgE or by C- and C'-reactive protein (CRP), a new basophil-specific nonimmunoglobulin protein, bound F(ab')₂ fragments of IgG and IgE. On the other hand, F(ab')₂ fragments of IgG but not of IgE bound to the surface of nonstimulated basophils, probably because of the large proportion of basophils that were spontaneously activated. Our data indicate that human basophils express an Fc gamma receptor, and that the IgG receptor is different from IgE receptor.

Remote PC debugging & Application monitoring Have you ever wanted to debug a remote PC from your Android phone, or just get more information about an application running on that PC? Do you like to know when your

application stops unexpectedly? Do you want to get visual feedback about what your PC is doing? To make your life easier, we added features to “Remote Control” and “Application Monitor” to show you exactly what’s going on. Now, if an application on your phone crashes or seems to be doing something weird, you’ll be able to see what’s going on. The best part is that you can view this information from your phone, anywhere on the Internet, even when your phone is offline. To access these features, you’ll have to install an additional application: Remote Control: You’ll be able to use 2d92ce491b
