You will be happy to see that we work as a team that is flexible and willing to look at new possibilities and challenges. This team consists of experienced professionals with many years of combined experience in the world of sheet metal construction and timber construction. Therefore, we work in a systematic manner with various views and perspectives, looking at all the possibilities and alternatives. Our contact: Email semassoftware.se@gmail.com Tel: +45702407549 Thursday, January 2, 2014 Recently we were asked to create a bespoke staircase for a commercial project. This is how it developed in practice. A new site, a new building. No matter how many times we've worked on this site or this building, it is always exciting to start a new project. And even more so when the project is a new type of construction. The whole difference here was that we worked on a metal structure, not a concrete one as in the previous projects. This is very exciting because it's just as new and thrilling as the typical new-fangled office building. As always, we start our work as quickly as possible. This means that we do not want to jump into the project without having an idea of what we are doing. We would rather think through the whole procedure before we start. This is essential, because what can be done right away, can be done wrong later. And that is the whole purpose of planning. The plan We first plan how we are going to make the stairs, and what type of stairs we are going to make. In this case, the type of stairs is a bespoke stair with a foldable surface. In other words, the stairs can be collapsed and stored in a container. This means that the stair is still usable after it has been transported. Once we know what we're going to make, we also know what the project cost will be. This is always easy to find out, because we've already done the pricing. The right amount of price is as important as the plan. In other words, if the price is too low, we are going to get stuck with the stairs, and if the price is too high, we will not be able to make the project anymore. Another very important thing is that the client must be informed of the project. So, we inform them of the date that we are going to start the work, and the price of the

Program, Software for Holzbau, Zimmerer, Treppenbau und Fertighaus. . Professional education. In 2014, SEMA celebrates its 30th anniversary!.. Vocational training. In 2014, SEMA celebrates its 30th anniversary! We invite you to take part in the international exhibition of architecture and design - SEMA, which will be held from September 29 to October 2 at the Messe Bar exhibition center (Dusseldorf, Germany).For decades, SEMA has been the premier venue for showcasing excellence in architecture and design. In 2014, the exhibition is celebrating its 30th anniversary, and specialists and guests are already beginning to prepare for this event. fffad4f19a
