7.0/10 by 31 users CRUCC 2.4 CRUCC 2.4 is the simple and fastest way to calculate car audio anti-theft security code via audio, and it also includes a full-featured radio receiver/decoder and a RDS decoder. CRUCC 2.4 also has an interesting feature, it can bypass the GPS when searching for radio stations, it means you can use this software with your mobile phone GPS to find out your car location via GPS when the security code is changed. CRUCC 2.4 also have a serial number and you can add serial numbers to your user list to ensure the software has the latest update if you have not updated it, by serial number you can also search the software and find out if you have the latest version or the previous versions. Before you start with CRUCC 2.4, you need a dongle hardware key to work. You can get the key from the cable box manual or factory. You can buy a cable box key from most cable box manual if you don't have a key. Connect the cable box dongle hardware key to the CRUCC 2.4 software, then the CRUCC 2.4 software will identify the dongle. If the hardware key is found, the CRUCC 2.4 software will load the secure code of the cable box to the software. If the dongle hardware key is not found, the CRUCC 2.4 software will display a message saying "dongle key not found" and ask you to open CRUCC 2.4 software then reset and try again. You can buy cable box key from the cable box manual or factory. You can change the secure code on the CRUCC 2.4 software or the radio receiver/decoder and the CRUCC 2.4 software will identify the dongle, and it will load the new secure code to the software. To get a list of radio stations, you need to connect the CRUCC 2.4 software to a RDS decoder, and then you can listen to the radio stations. For each radio station, the CRUCC 2.4 software will automatically save the radio station's call-sign, location and time in the database. You can also listen to RDS and save the information of each radio station in the software. If you have a dynamic 2d92ce491b
