=== Nowadays, typing is a fundamental aspect of day-to-day life. No matter what your job, if you're a student, an office worker, a business person, a designer, an inventor or even if you're just a person who enjoys writing to express your thoughts, there are more than a few things you would want to do on the computer. But one thing is for sure, when it comes to doing these things, typing is hard. Wouldn't it be a lot easier if you could quickly and easily apply the transformations that occur in your head when you want to use your English keyboard? Well, that's why we've created Case Transformer. With Case Transformer you can easily change the case of your selected text. The case transformations available: Upper case Lower case Title Case Sentence Case Inverted Case === Once you have the app installed, you can apply all the transformations to any piece of text using the CTRL+T shortcut. There are also a number of other possible cases that you can apply: The selection can also be changed to upper case, lower case, title case, sentence case, inverted case or wrapped to next line. And there is no need to re-select the text, just type your new text and Case Transformer will adjust the selection. Another nice feature is that Case Transformer allows you to change the default CTRL+T shortcut with any custom shortcut of your choosing. A very useful tool for those who write a lot For any of the above reasons, Case Transformer is a useful tool for all those who write a lot. And since it's free, it's a tool you can't afford to miss. Don't forget to: Give us your feedback in the comments below. === Like us on Facebook: Don't forget to give us a thumbs-up if you like our work! Extremely fast and versatile macro recorder/player. Automatically record and play complex sequences of keyboard and mouse actions. Automatically splits and analyses long actions into chunks. Automatically checks that chunks are properly reassembled. Runs macros concurrently, so no special conditions are needed for running them. Unlimited number of running macros and customizable macro commands. Captured sequences can be recorded to string collection, files, clipboard or directly to MIDI. Macro editor with a built-in synth-like sound engine for recording, editing and playing your macros. Run macros remotely through the network. How KEYMACRO works: You can easily record any keyboard or mouse actions in this program. The macro can be recorded from a current window or from an existing string. When you select the actions you want to record, KEYMACRO will automatically split them into a number of chunks. Each chunk can be played or replayed separately. KEYMACRO requires a few files to work properly: Window structure - main window in which you can select strings to play as macros and other window which contains commands for splitting and reassembling your macro. Commands - this is the file which contains commands to perform actions. They are written in a simple text format which can be easily edited. Commands are always preceded with the character -. Playing commands - these are the commands you will actually want to execute when you playback your macro. They are also written in a simple format and are separated by the character ;. String collection - this is the file which contains the macros to be played. It is written in the same format as the commands. Actions - this is the file which contains information about your selected actions. This file will be automatically created in the same directory as the commands file. LOGO-OS: This is the name of a software project for operating system developed by team of students at the University of Oulu. It is designed as a research project in cooperation with Microsoft for enhancing Windows 7. It is basically a Windows replacement with fast booting, which enables you to open files and applications within seconds. This is done by being able to run an executable file called Windows Logo. Features of this Operating System: No complicated menus and mouse clicks - the user can now quickly run the desired application and open the desired file, by simply clicking on the icon of that application and opening the file in a new window. Small startup time and no boot times - instead of the slow "Windows logo" startup screen
