

A: This is your answer: Defining your function using web fonts Create a plain text or rich text (RTF) file. Add a new tab to this RTF file. Create a new paragraph in this new tab. Add the following CSS style: `.root { font-family: "Vera M.s"; } .monospaced { font-family: "Courier New"; }` And add the following html: At this point, you now have a text file (e.g..txt) or rich

---

text format (e.g..rtf) that contains an embedded web font definition. Here is a regular (non-web font) example:

## Viewing Options Specifications

Overview This Uni-Q™ Dual Faucet features a quiet yet powerful design that comes in an attractive bowl faucet that is easy to install and style. It features an integrated 2" cold water outlet which eliminates the need for another piece of plumbing and it comes with a soft-close, powerful discharge spout. Dual Faucet Features Fully integrated 2" cold water outlet Glass cover seals discharge outlet Easy-install bowl faucet included Soft-close, powerful discharge spout Periodic maintenance costs are based

---

on 13 years of operation 5-year warranty\* \* These faucets are manufactured with this exclusive 2 year labor warranty, and a variety of other components have their own limited warranty. For your convenience, it is recommended that you register your product with us at the time of purchase. This will allow for quicker in-home service or replacement of warranty parts. FEATURES 1 year limited warranty UL Listed Low Flow Rate Spout is Spigot (two feet in length) Faucet Features: Bowl Faucet Fully integrated 2" cold water outlet Glass cover seals discharge outlet Easy-install bowl faucet included Stainless Steel

Nov 2007 Abstract The chaotic dynamics of a conservative-dissipative system has been previously proven to be equivalent to a dissipative-reversible system. This work explores the similarities and differences between the two in terms of the macroscopic variables. A systematic study has been performed for four different cases: hydrodynamics, viscoelasticity, thermodynamics, and thermodynamics. The main findings are: 1. The dissipative variable cannot be distinguished from the reversible variable in the continuum equations; 2. Numerically, each of the cases exhibits the same properties, and the differences

---

between them are purely due to the simulation parameters; and 3. The conservation and dissipation properties of the model systems have been used as an important tool to understand the performance of both dissipation-reversible and dissipative-reversible systems.
