In accordance with the principles of the present invention, in a MOSFET device, a metal strip is formed on an insulator layer in a trench such that the metal strip forms a drain. A gate insulator layer is formed on the sidewalls and bottom of the trench and is extended along the edge of the drain. A gate is formed over the gate insulator layer and is disposed over the drain. A source and source-gate extension are formed in the substrate and are positioned adjacent to the drain. The metal strip forms a first region over the source, a second region over the source-gate extension, and a third region over the drain. In one embodiment, the source, source-gate extension and drain are formed of a first conductivity type, and the second region is formed of a second conductivity type.
