With ResizeExplorer you can resize explorer windows to ANY aspect ratio or dimension. Although ResizeExplorer is capable of controlling the size of virtually every window in explorer (including windows explorer), some applications simply resize themselves to the original size, (ie: the size that windows 98 is in without any manual resizing). ResizeExplorer can resize/move every window in explorer, but for best use of the application it's recommended that you manually resize the window you want to resize/move BEFORE using the application. ResizeExplorer commands: (Note: there are many other functions in ResizeExplorer such as: Show Hiding, Resizing, Moving, Maximize, Minimize, Iconize, Shrink, Float, Align Horizontal, Align Vertically, Stretch to Fit, Border Style, Align with Screen, Maximize to Windows, Maximize to edge, Minimize to Windows, Maximize to edge, Minimize to corner) F1 Help: Prints Help for the selected command. 2 F2 Help: Prints Help for selected commands. A: ResizeExplorer has a simple workaround for overlaps, simply press the "cancel" button on the button bar that pops up when you click on a window. If it continues to display the unwanted window, click on the "cancel" button again. Note: ResizeExplorer has some support for multiple overlapping windows, where the overlapping windows are not pushed off of the taskbar, and may even allow you to move multiple windows off of the taskbar by resizing/moving them. Q: Why do certain applications change their size when I change the size of explorer windows? A: Windows 97 is very limited to the size of windows, and does not allow any application to change the size of its windows. In the past, some applications, such as Microsoft Office 97, have defaulted to resizing themselves to the size of the original window of explorer. In these cases, ResizeExplorer can cause the desired window to resize/move according to your settings, and is the only way to make sure that the desired application/window does not get buried in the taskbar, or not allow you to easily resize the window the way you want.
