J3DWorkbench allows you to import 3D objects & terrains in a variety of formats, animate them, add effects and behaviors. Scenes and simulations can be played back with the tool, or delivered by HTTP to a web page with Java Webstart. No programming is necessary to run your applications. J3D is built on JavaFX and uses the Java API for 3D (J3D). J3D J3D is a JavaFX based 3D API that is used in the popular Java application J3D Workbench. J3D has a C++ wrapper that can be used to write the Java app code for J3D, if desired. While J3D is optimized for desktop applications, it can be used to write mobile/browser/web applications. You can use the J3D API to easily animate and draw in your application, or create world models for use in games. J3D is available for: Windows, Mac, Linux, Android and iOS. The J3D API is easy to use, even for the non-programmer, and is highly productive. This free version of J3D is fully functional for testing, but to use all the features, such as extra plugins, you need to purchase the license. J3D Application License Terms J3D workbench is distributed under the GNU General Public License (GPL). If you are a software company you can distribute J3D Workbench as part of your application. To do this you will need to purchase a commercial license and you can either download the precompiled version or, if you prefer, you can generate a signed version of J3D Workbench from your build server. Here are the steps to generate a signed version of J3D Workbench: Unzip the J3D Workbench zip file in a local directory. (You can use the extracted directory instead of the zip file). Make sure that you have downloaded the latest version of Java Development Kit (JDK) and Java FX SDK for your development environment. In your environment directory you will find a JDK7.zip file and the corresponding JDK7 folder. In this case you can open the JDK7 folder and copy the
