As a computer power user, you would no doubt utilize a multitude of tools to be able to customize your Windows operating system. Among one of the most useful tools is the User Account Control (UAC) switch. It's an effective way to grant or deny permissions to users and other programs for certain operations, especially for a novice user. Without Windows 10, there are a number of tasks that are not possible. For instance, you might not be able to rearrange mouse shortcuts, move items, or shut down computers properly. Well, Microsoft has just introduced a new built-in UAC bypass that you should take into consideration when managing permissions. First of all, you need to have a certain version of Windows in place. Windows 10 Windows 8.1 Windows 8 Windows 7 How to Bypass UAC Bypass UAC Open the Command Prompt and then type the following command: uac /SetPresentationPolicy: permissive Then type uac /SetPresentationPolicy:None Finally, type uac /SetPolicyPath: "C:\Windows\uacls\software.exe" How to bypass UAC on Windows 8 Right-click on the Start button and select Command Prompt (Admin) While in the Command Prompt type this and hit the Enter key: net user YOURUSER /add That's it! You will now be given the option to create a user account for your user! It will also create a password for you (that's so you can create other Windows accounts that should not have UAC enabled.) A number of people are complaining about the lack of internet connectivity when they try to access the Oculus Rift from more than just one computer, though most of them only have a single network connection. To resolve the issue, all that one needs to do is plug in an ethernet cable to the router and then to the computer. You would still be able to access the Internet as long as the router is connected to a network. To install the Oculus Rift on the system, it is just a matter of following the guide. It is a simple, step-by-step process, and it doesn't make use of any third-party software. Some users are suggesting that you manually remove the Oculus Rift from the hard drive so that you can start over. You will have to uninstall the program and install
