KEYMACRO stands for Keymacro Control and is an administrative utility developed to create, change and remove keys in the Windows registry. It is more flexible and has improved system flexibility. The simplest usage is when you need to create new registry keys and it doesn't have any functionality, you can just copy and paste some text. You can use it to remove keys that have been created before. You can view which key exists in the registry in a selected key. The information you see includes the name of the key, it's value, size and value. There is a option to show the current path of a key. The program also has a very useful feature – you can make a backup of the key before you remove it. You can open all registry keys from the list with just one click. KEYMACRO is a convenient utility for the registry and the Windows Registry Key & value tool. Operating system : Windows 8 / Windows 8.1 / Windows 10 / Windows Server 2012 / Windows Server 2012 R2 / Windows Server 2016 / Windows 7 / Windows Server 2003 / Windows Server 2008 / Windows Vista / Windows XP
