schematics,datasheets,diagrams,repairs,schema,service manuals,eprom bins,pcb as well as service mode entry, . The mother board is most important part which is running your PC is motherboard but the part does not have the schematic therefore making the one who has sold the motherboard is the one who has responsibility to give the schematic information. [9] The schematics are the breakdown on how each part of mother board works. Do not use software to find the schematics from the given motherboard because you might get more schematics from a software. There are times when the software would not give you the schematics even if you choose a specific type of a schematics. This means that the software might be not as reliable as expected. Besides you can get the schematics from the internet by just doing a search with the given motherboard. [9] The schematics is used for

repairing. You can do some repairs to the motherboard. You can repair the motherboard if it is having problem such as missing display problem, no speaker problem or others. You can do a comparison between the schematics and the service manual and then choose the better part. There are also schematics on some parts such as the RAM and the video card to give you an idea of the type of RAM and which type of video card is being used. You can also get the schematics if you are having problem with the motherboard. You can do a comparison with the schematics and the service manual to see the missing functions that is being there. After you find the missing functions on the motherboard then you can do a comparison to check how the missing functions are being activated or deactivated on the motherboard. In order to get the schematics you need to go to the Internet and search for the schematics. [¶] Here are some websites that can be used to find the schematics.
