ArtiosCAD 12.0.10 - User's Guide - PDF icon PDF version. Expand all Collapse all . ArtiosCAD uses the concept of layers to build a complete project. You can create layers for each task and then apply styles to the layers depending on their purpose. You can also create per-layer options that specify how the layers should be displayed. You can view the layer on screen as you work to check its properties. Layers can be divided into three categories: - Model layer - Database layer - Project layer You can create and apply layer styles. Styles are applied to display these layers in the view.
