
Airbox PRO - Broadcast Playout - Software ...

PlayBox Neo - The Next Stage of Innovation •
Single / Multi-Channel Playout / IP Streaming
Automation with Interactive graphics • Ingest •
Cloud Playout . Airbox Pro is a versatile multi-
channel broadcast automation software which can
handle every aspect of broadcast playout:
scheduling, monitoring, time code,
infrastructural. Mothers' social cognition ability is
associated with their child's social-cognitive
skills: The moderation role of parenting. Mothers'
social cognition ability (i.e., perspective taking,
theory of mind, and empathy) has been identified
as an important parenting variable for the
development of social-cognitive skills in children.
To the best of our knowledge, however, no
studies have considered the interactive effects of
mothers' social cognition ability and parenting on
the development of their children's social-
cognitive skills. The current study aimed to
address this issue by examining the moderating
role of parenting in the association between

mothers' social cognition ability and their children's social-cognitive skills. A community sample of 240 mother-child dyads participated in this study. Participants completed a questionnaire designed to assess mothers' social cognition ability and the Social-Cognitive Skills Scale, which was used to evaluate the development of children's social-cognitive skills. Multiple regression analyses were conducted to examine the interaction between mothers' social cognition ability and parenting. The findings revealed that mothers' perspective taking ability moderated the positive association between parenting and children's theory of mind and empathy skills. Specifically, a higher perspective taking ability was associated with a stronger association between parenting and children's theory of mind and empathy skills. These results indicated that parents with better social-cognitive ability may be more likely to engage in emotion regulation and understanding of others' emotions to improve

their child's social-cognitive ability. Vesicoureteral reflux associated with vesico-amniotic shunting in a twin pregnancy. The development of vesicoureteral reflux in a twin pregnancy is well described. Reported cases have included the utilization of amniotic fluid to ameliorate or delay its development. Although complications associated with amniotic fluid drainage in general are not unknown, the development of vesicoureteral reflux associated with vesicoamniotic shunting has not been previously documented. We report a case in which twin A developed renal insufficiency secondary to vesicoureteral reflux, with reflux being treated with vesicoamniotic

Multi-Platform Playout Solutions Playbox Neo and PlayBox Wireless Media Console are single channel DVR systems with simultaneous multiple channel streaming... .. The PlayBox Playout features a revolutionary new "user interface" that

allows you to quickly and easily... Playbox Homeplay is a revolutionary new content playout system for the . Playbox Playout System - IP Streaming and Cable TV Playout . Playbox Neo is a unique, all-in-one, high-performance next generation DVR and multi-channel playout and streaming solution . Playbox Wireless Media Console - Automated Playout... 4bc0debe42
