
Aero Wizard .NET Library Incl Product Key

Aero Wizard.NET Library is a library designed to help users create custom Aero Wizards. The library relies on Visual Styles to help design a visual theme and, since it requires Visual Studio, it is fully compliant with the Microsoft guidelines. There are three major controls integrated into

the project, namely WizardPageContainer, WizardControl, and StepWizardControl. While the first enables users to create a custom wizard, managing page creation and navigation, the second on the list is capable of building on the container to guarantee a seamless Aero Wizard experience. Furthermore, it ensures the

wizard can morph correctly on each operating system in part. StepWizardControl's role is to include a list hinting at the current position through the flow by extending WizardControl. It is worth mentioning that the library provides developers with a positive design-time experience that consequently allows them to focus on the wizard function

and not on possible inconsistencies and ways of avoiding their effects.

According to the developer, the project comes with some extra features, namely a fully evented generic list, several controls for labels and buttons that can paint correctly on glass, an extension class that allows painting glowing text and a specific class that permits the creation of

extended glass window effect.

The.NET Library uses Visual Styles for the creation of custom wizards and is compliant with the Windows Aero Guidelines. The.NET Library uses style templates that users can apply to any type in your control in order to paint your controls correctly on Aero Glass. The.NET Wizard library is designed to make it easy for

users to create custom wizards.

With the library, it is easy to create large wizards which have no need for a framework.

The.NET Wizard library is easy to use and can be extended to suit your application needs.

The.NET Wizard library extends the Windows Control WizardContainer control and contains a set of built-in wizard controls. The.NET Wizard

library supports both 32-bit and 64-bit computers.

StepWizardControls role is to provide a list that hints at the next step through the flow of a wizard. It is a child class of WizardControl and extends it to guarantee a seamless experience while interacting with a user.

WizardControls role is to build the actual wizard control. It contains all the logic for

building the wizard content. WizardPageContainerControls role is to help build and configure the pages in the wizard. It creates the wizard pages and manages the navigation logic. Wizard control is used to build a specific wizard content. It is a child class of WizardControl.

WizardPageContainerControls role is to help build and

configure the pages in the wizard. It creates the wizard pages and manages the navigation logic. Features:

- Supports Windows XP-
- Windows 7 Operating Systems
- Windows Forms-based GUI
- Automatically generates intellisense and prompts that line up with Visual Studio IDE
- Supports designer, public properties and events that allow

for designer automation Extend

Aero Wizard is a very simple product, developed in C# and it is a specialized library for creating applications with a wizard interface. The library comes with a series of controls that build on the Wizard control and add any other functionality needed in order to complete a wizard operation.

WizardPageContainer is the Wizard control where developers can place all the steps of the wizard. Its role is to manage page creation and navigation, enabling the user to create all the steps that a wizard should have. StepWizardControl is the one that provides the list to the user to display the steps of the wizard, however it can be customized, and thus change in

looks for each operating system. Its role is to build on the StepWizardControl. A specific class, WizardGlass is designed to paint correctly on glass, making the text and the buttons glow, with the exception of the text that is not painted on glass. This class is extended from the WizardControl. Finally, StepWizardList is a list with a list hint and it is designed to fit

all operating systems, be it Windows or Windows Phone. It is the one responsible for handling the generic list, that can be built on, and makes use of each one by the developer.

Price & Availability: According to the developer, the library will cost \$49,59, being available for download from CodePlex. Visit the project's website for more

information. Conclusion The library is designed to improve the way in which wizards are created and used, however it has a fairly limited variety of features. However, it delivers a unique look and feel for every operating system, therefore it compensates for what it doesn't have. As far as what it does, it comes with such controls as ListHint,

ListStepWizardControl,
WizardGlass, and
StepWizardList. Finally, it is
pretty well documented, at least
in the form of a tutorial
included at the library's website.
The library is fairly simple and
easy to implement as the
developer is aware of what he
has to manage. However, it
delivers a different way of
implementing wizards in
