- ✓ Convert Sprites to any symmetry (square, rectangle, diamond, rectangle)
- ✓ Optimise Sprites - remove transparent areas
- ✓ Select top left, top right, bottom left and bottom right parts of Sprites for optimisation

Communications platforms for performing video

---

streaming from a storage media have been increasing in performance and capability. For example, implementations are allowing for streaming of high definition video content from a storage media.

However, during streaming, it is desirable to provide users with information about the content that is being streamed so that they may make informed decisions about their viewing experience. Such information includes information about the content, such as its title, and information about the bandwidth

---

and other performance metrics of the streaming interface. In the case of high definition video, the higher the resolution of the video that is being streamed, the greater the bandwidth of the interface as well as the greater the CPU and bandwidth requirements of the processor. Thus, it is important to provide such information so that a user may make informed decisions about whether to watch the video on a computer or a TV. Additionally, it may be desirable to provide additional information, such as annotations and comments,

---

alongside the video stream.  
However, for large content

---

**System Requirements For Amos Sprites Converter:**

**Minimum: OS: Windows 7/8/10**

**CPU: Intel Core 2 Duo E6750**

**Memory: 6 GB RAM**
