composersFumonisin Fumonisin (also called mycotoxins) are a group of fungal metabolites consisting of a common  
structure (fumonisin B). The toxins are produced by *Fusarium verticillioides* (formerly *F. moniliforme*) and certain other  
species of *Fusarium*. Symptoms of toxicosis can be very similar to those caused by other fungi and includes digestive  
problems, infertility, anorexia and death in some cases. Because of the widespread presence of *Fusarium* in stored maize,  
these metabolites are commonly found in human and animal blood. As a result of the findings in the blood of animals and  
humans, fumonisin have been linked to cancer, leukaemia, liver disease, and cancer of the spleen. In one outbreak of  
mycotoxicosis, in which fumonisin was detected in milk, all the persons from one village became ill and most became ill  
within a month of drinking contaminated milk from the herd of lactating goats. During a general mycotoxicosis epidemic  
among infants and children, fumonisin was found in both breast milk and

of in vitro fertilization and  
embryo transfer in women less

---

than 40 years of age. From November 1981 to March 1983, 1,004 cycles were performed in 932 patients who were less than 40 years of age. The outcome of embryo transfer was evaluated in this population, and comparisons were made with similar data for patients 40 years of age and older. Of the 1,004 cycles, only 6 were cancelled because of poor quality of oocytes. Fertilization rates were 58.2% for cycles where oocytes were aspirated and 45.6% for cycles where oocytes

---

were retrieved after ultrasonography-directed follicular aspiration. The percentage of cycles with at least one acceptable embryo obtained was 76.7% overall, and 67.3% for the first attempt. The implantation rate for patients 40 years or older was 27.5%, compared with 30.4% for patients less than 40 years of age (NS). The implantation rate for the first cycle was 18.1% for patients 40 years or older and 17.4% for patients less than 40 years of age.

---

The ongoing pregnancy rate was 13.7% for patients 40 years or older and 17.2% for patients less than 40 years of age (NS). In conclusion, the embryo transfer outcome in this group of patients was similar to that for patients 40 years or older. June 26, 2015
