Q: java.io.EOFException (no kidding!) I am having trouble with this. I have a following code: InputStream inputStream = socket.getInputStream(); BufferedReader reader = new BufferedReader(new InputStreamReader(inputStream)); String line; while ((line = reader.readLine())!= null) { outputStream.println(line); if (line.contains(" ")) { System.out.println("here is my " + line.length() + " characters long line " + line); } } System.out.println("0, actually this should be at the end of code"); socket.close(); reader.close(); outputStream.close(); And what is going on? It prints this line: here is my 0 characters long line null and then I have the following in output: java.io.EOFException (no kidding!) 0, actually this should be at the end of code I read that EOFException is occuring when I try to close inputStream but, shouldn't the code be closed after the while? I tried to code it this way: OutputStream outputStream = socket.getOutputStream(); BufferedWriter writer = new BufferedWriter(new OutputStreamWriter(outputStream)); String line; while ((line = reader.readLine())!= null) { outputStream.println(line); if (line.contains(" ")) { System.out.println("here is my " + line.length() + " characters long line " + line); } } writer.close(); socket.close(); But it didn't help at all. And if I remove the second while loop it is

not working. And another strange thing I noticed is that there is no exception in the first case (except of println) and output is still printed in the second, although in the first I haven't really printed anything. A: When you close an InputStream, no data is passed to the operating system (hence the exception). Also closing an OutputStream will not close the underlying output stream;

Q: ruby read text file I have a text file test.txt contains 10011 0321 I want to read it and 1. get three columns which are first,second and third and create three hash for first, second and third. 2.print "first key is"> so far I got. f = File.open("./test.txt","r") a=1 File.open("./test.txt","r") do |source| source.each_line do |line| puts f["a"].to_i+","+f["b"].to_i+","+f["c"].to_i end end but I do not know how to implement it into the script. Any help? A: You're not actually using any of the variables. The way you have it is also very confusing. Here's a script that does what you want: f = File.open('test.txt') first_hash = Hash.new second_hash = Hash.new third_hash = Hash.new while(line = f.gets) do first, second, third = line.split(/\s+/) first_hash[first.to_i] = second.to_i second_hash[second.to_i] = third.to_i end p first_hash # => {10011=>0321} p second_hash # => {0321=>10011} p third_hash # => {} If

you want to read the file line-by-line, there's a way to do this. First, let's make an IO object to read the file: File.open('test.txt', 'r') do |f| #... end Next, create a loop which reads a line, splits it, uses the split method to get the three values, and checks to see if they're empty. If they are, then we have to create a new hash to put them in. lines = [] while line = f.gets #... lines
