AnySplitter Crack + For Windows (April-2022)

----- Arguably the easiest way to split a file in multiple segments. Simply import the file to be split, choose the number of parts (from 1 to 20), select the disc drive where to burn the parts and click on "Burn". Don't forget to insert the appropriate blank disc. The program will write the file on each disc as you select them. You can choose between three different speeds, use the "Optimize Discs" option to determine the optimal speed for each disc, the user can decide on the size of each partition (if there are more than one), the size of each disc, and even set a custom number of tracks per second (tps). The "Optimize Discs" checkbox will use your settings, so once you have determined the optimal settings for each disc, they'll be applied to all the created discs. You can even read the content of the disc with Windows Explorer, if you want to be able to copy or delete the files in advance, or you can test the discs before burning. AnySplitter is a tool for anybody that needs to split files. You can use it to split files that are too big for a CD, it works on floppy discs, hard discs, USB discs and even the SD card. If you have the Text-to-Speech Universal Utility installed, it will be included. It also includes the functions to burn the files, you can even set a custom number of tracks per second. Key Features: ----- - Split any file into multiple parts. - The user can select a number of parts, decide on the size of each part and on the speed of the burn. - The user can configure the speed and the size of each disc, as well as the tracks per second. - Discs can be optimized before burning. - You can test the discs before burning. - Custom number of tracks per second. - You can import any file as long as it is under 2 GB. - The size of each part can be set up to 4 GB. - The user can decide on the user-defined sizes of the partitions, and the size of each partition. - The user can select the default disc drive, or he can set one or more disc drives as well as the path of the disc drive in which the program will inscribe the files. - The user can decide on the user-defined number of tracks for each disc.
