Who needs tools or even good eyes when you're a jungle explorer? Mettility has grown to be one of the most powerful and popular all-in-one windows apps, clocking more than 500 downloads daily for all its features. Now, Mettility supports Mac OS, adding a never before seen update of its look and feel for both the new and the devoted version. All the essential tools are now more accessible, and each package has a swift and intuitive interface which can be used easily to take your pictures, add sharp 09e8f5149f

SMTP Relay Tester

SMTP Relay Tester is an effective tool for testing your mail server to prevent spamming. The application connects to your mail server and initiates a few SMTP transactions to verify that the server is actually an "Open Relay". This test must be executed when you do not know your mail server IP address or don't know what port your mail server is listening at. Test your mail server with the SMTP Relay Tester application, it's a simple free tool that can find your mail server "Open Relay" if it is on the same network and listening on the same port. The advantage of this free tool is that you can use several test methods, in case you have problems with your mail server, such as your mail server is not accepting your e-mails. The SMTP Relay Tester provides different test methods: - The Status method, testing your mail server's status: local, catch-all, open relay, and local and catch-all tests can be done. - The Port method, testing the mail server listening port to know if your mail server is listening on the specified port. - The Sources method, testing your mail server's ability to accept e-mails from various sources, e.g. this server is an open relay. - The IP method, testing if your mail server can accept e-mails from your own personal computer. - The IPv6 method, testing if your mail server can accept e-mails from your own personal computer connected via IPv6. You can use these methods sequentially or randomly, whichever you think is most appropriate. How can you download the application? - Select the Download option, or the download button in the right side of the SMTP Relay Tester main screen. - Download and install SMTP Relay Tester. - Run the SMTP Relay Tester application and follow the guide to test your mail server. - If you are sure that your mail server is functioning as an "Open Relay", you can close SMTP Relay Tester. If you need to learn more about the test methods and their results, you can see the instruction for your test method. For more information, visit us: Find us: Email us: purok@purok.com SMTP

What's New in the SMTP Relay Tester?

SMTP Relay Tester is a small application that can be used on every SMTP servers (POP3 or SMTP). It will test the SMTP server to find out if it is working as an open relay. SMTP Relay Tester Features: - Tests and check if the SMTP server is functioning as an Open Relay (No filtering/blocking) - Tests and check if the SMTP server is functioning as a blocking relay (Implementation of the BLO (Block message on line) option) - Test and check if the SMTP server is functioning as a email/censoring relay (Additional and/or blocking optimizations) - Tests and check if the SMTP server is functioning as a filtered relay (Implementation of the FLA (Filter message on arrival) option) - Supports recursive tests (Does an SMTP server also act as an Open Relay?) - Relays check is non-invasive. RBLs won't be notified of any blocking tests or other stats. - Compatible with all SMTP servers, the older SMTP servers and also the new SMTP servers - Reports when the SMTP server is functioning as a Open Relay or not. You can also check if the server is functioning as a blocking or a filtered relay. You can also check if it is working as an Open Relay when connected from a remote computer. If you want to know the version of the SMTP server you are testing, you can find the information in the header lines of the email that is returned by the SMTP server. - You can also change the Open Relay setting (Default and Max Size) to prevent blocking/dropping spam traffic. - Relays are limited to a maximum of 10.000 messages per day and ten days per year. If you don't have this limit, you must decrease your MaxSize parameter. POP3 Relay Tester is a tiny application that can be used on every POP3 servers, with a small number of functions. POP3 Relay Tester Features: - Test and check if the POP3 server is working as an Open Relay (No filtering/blocking) - Test and check if the POP3 server is functioning as a blocking relay (Implementation of the BLO (Block message on line) option) - Test and check if the POP3 server is functioning as a filtering relay (Implementation of the FLA (Filter message on arrival) option)
