While the planet we live on still holds plenty of mysteries, the Universe around us has even more secrets to be discovered. Saturn 3D Space Tour is a nice tool that brings one of the neighbor planets from the Solar System to the screen. The program has a simple interface that should be quite easy to figure out, thanks to the intuitive layout. As mentioned, the app takes you on a realistic journey around space, displaying Saturn in all its beauty. The sixth planet from the Sun is also the second largest in the entire Solar System, after Jupiter. The gas giant can be noticed on the night's sky with the help of a telescope and stands out thanks to the prominent ring system that surrounds it. By accessing the program's interface, you can adjust the size of the video. You can either choose one of the preset values or use the desktop settings. Furthermore, the animation speed can be adjusted with the help of a slider. Alternatively, a random sequence may be used. The program can be launched individually or it can be set as a screensaver that can take over the screen every time the computer turns idle. The bottom line is that Saturn 3D Space Tour is a great tool that is sure to make all astronomy enthusiasts quite happy. Less experienced individuals should find this program easy to handle, thanks to the app's overall simplicity. Aston Martin's 200th Model May Be Based On Concept Car First Seen In 1967 Aston Martin's 200th car may be based on a concept car first seen in 1967. That year the British automaker unveiled the Vantage, which was similar to the Aston Martin today. Its design then attracted attention, and the concept continues to resonate with car fans. The all-new Aston Martin Vantage concept is set to be revealed at the 2012 Paris motor show in October. The concept is based on a prototype Aston Martin made in 1965 and owned by a museum in the United Kingdom. The concept is expected to start production in 2014, and will be Aston Martin's first non-V12 engine car since the DB9 launched in 2005. The 150-page version of the Aston Martin Vantage Concept Car Book is now available. It's a great way to learn about the all-new Aston Martin Vantage and Vantage GT12 Concept Car. It includes a biographical profile, technical details, new features of the Aston Martin Vantage V12 and Vantage GT12 Concept Cars, and data on both cars. The book is

Enjoy an amazing journey through space in the form of a wonderful planet Saturn. Starting from the atmosphere and reaching the surface of this planet, you will see some spectacular views of the planet and its rings. This is the world of games, and here I'm reviewing the game Extinct: Dino Hunter of course, its fun and exciting, sure to please even the most adamant dinosaur hunter out there. The game is apparently a sequel to Extinct of which I had already seen a trailer to and it looks good, as long as that lizard for instance was not a costume. Extinct: Dino Hunter is a game that was designed to be simple yet addictive and I think that is something that most of us would enjoy for the Android platform that we use. The interface is simple, which is nice, since most people will not have any background into that kind of stuff, but it has some kind of tutorial that can help you get started. First of all you are put into a large map and in one of these you'll find a second one, which also has some birds in it, ready for you to hunt them down as well. First mission complete! After that you are presented with some options which you can chose from, like the difficulty, the time you want to play the game in, and the different game modes. One of these options is Free Mode, which will allow you to play without having to pay for it. There are five animals, which are each unique and each unique kind of dinosaur that we know of. And yes, I am aware that most people are a lot more interested in the older or the more modern animals, but the game is not meant to be played with just that in mind, so if the other is not what you are looking for, you might just have to forget it then. But one other thing that is nice to see is that there is a total of 23 different dinosaurs, and I am sure that we are not done yet, so getting to play as these will also be something to look forward to. Next to that you can choose what to see which is a nice feature, but it is somewhat confusing. Well the first one is the map, which is a nice to have, but I think it should be presented in a better way, as you can see there is a long list of animals there, but you cannot choose any of them, you need to read it by yourself. The list is quite long, but the second one is much 09e8f5149f

The Saturn 3D Space Tour app was developed by iStrategyLabs, and you can enjoy it on the App Store. Featured If you have an iOS device and have been looking for a great way to take notes and jot things down anywhere you are, try out the Noteshell. It's an app that combines note-taking, journaling, and task management into one super simple app. By using the Noteshell app, you are able to create and edit notes and journals anywhere you are, whether you are walking, working, or just relaxing. This is perfect for the busy person that needs to get things off their mind. As you start creating and editing notes and journals, you are able to attach photos, voice notes, or even create sticky notes to your notes. Tapping on sticky notes will display them on the screen, much like you're seeing them in the real world. What I like about this app is that it's super easy to navigate. By tapping on the cards, you can switch to a different note, journal, or to a task. Not only can you attach images to your notes and journals, but you can also add voice notes, and make notes, journals, and tasks sticky. You're able to add tasks to your notes, journals, or sticky notes. The tasks can include questions, dates, projects, meetings, and even a shopping list. In fact, I've used the app in conjunction with an app called To Do List Pro, and you can add checklists to your tasks. This is a great app to use, especially when you want to remember something that needs to be done, but don't want to use an overbearing task list. I tried using it as a replacement for my Notion Notebook, but it's not quite there yet. As you add notes, journals, and tasks, you can archive them. Once you archive a note, for example, it will disappear from your noteshell. In
