However, the newer the OneNote edition, the lower the recovery speed. The application is very easy to use, thanks to its clean and intuitive interface. You just have to open a file, select the attack method and leave the rest to OneNote Password. Various recovery methods OneNote Password enables you to select from three attack methods. The Dictionary attack tries to recover the password based on a file containing a word list. The application integrates several useful files including names and English, German, Latin, Spanish, and Portuguese words. A nice feature is that you can configure OneNote Password to reverse the words or capitalize all the letters, so as to try out as many combinations as possible. The second method, named Brute-Force, enables you to recover a password based on combinations of characters. In this case, the length of the password must be between 1 and 19 symbols. You can configure the search behavior, selecting the type of characters OneNote Password should use. Last, but not least, the 'Mixed' method allows you to combine the first two options. In case you only remember a few symbols, you can define part of the password and the application starts its search based on the predefined characters. The GPU speeds up the recovery process Depending on your computer's performance (especially the CPU speed) and the length of the password, the recovery process might 77a5ca646e
