Thousands of programmers didn't even get the simplest ideas wrong. They simply walked out of the problem/project. Anyway, not all of them did. Some of them really thought about it and took the time to write their ideas down. It's a pity there are just a few of them. Thousands of programmers didn't even get the simplest ideas wrong. They simply walked out of the problem/project.

Anyway, not all of them did. Some of them really thought about it and took the time to write their ideas down. It's a pity there are just a few of them. It's no wonder that if there are fewer such people, the world is a better place. The alphabet is worth tens of thousands of them. It's worth having yours. 7+ Calendar, Tabs, 5 Categories for all different date types, summary and print option. Includes many other functions like: changing date interval, floating point math, time intervals, days per month, etc... Date Calculator is a powerful, yet very easy-to-use and organized day and date planner for Windows. It features numerous customizable features such as five different categories for displaying various types of dates, start and end dates, time intervals, statistics, and much more. The application operates in various ways, enabling you to create a countdown calendar, add a holiday or event to the current day or time, calculate the amount of days or weeks

between two dates, or plan appointments or meetings. In the “Calendar Settings” window, you are able to change the current date interval, enter various types of holidays and events, use the “Link to Google Calendar” option, or access additional event categories and personalize the date layouts. The “Calendar Summary” window enables you to see your current and upcoming events, as well as set the application to display information in different kinds of ways, including: a calendar, a list, a tabbed display, or a graph. In the “Calendar Tabs” window, you can organize the dates into five categories: daily, weekly, monthly, yearly, and holiday. You can also create, edit, add, or remove tabs, set up a new default day for the calendar, as well as print the calendar and categories. The “Calendar Settings” window is used to manage the general options, while the “Calendar Options” window enables you to choose any user-defined tab to display on the display screen, change the date interval, modify

the default calendar for the general category, add or remove custom holidays, change the date format, configure the visualization of the dates, and more. The “Statistics” window enables you to see the last dates in the current month, the total number of days and weeks, and the total number of events in the calendar. The “Link to Google Calendar” enables you to use the application’s calendar functionality with Google. With this option, you are able to add or remove a new calendar, as well as customize the date layout. The “Calendar Settings” window is used to modify the “Calendar Options” settings, choose which date interval to use, display the application in a grid or a
