The cannabis database contains information about the cannabis strains and the distributors who sell them. The program is suitable for users who wish to acquire and grow the plants for medical purposes, each strain featuring a list of ailments that it can treat. Through the Med Finder, you can find strains that can treat one of the listed diseases; glaucoma, dystonia, fibromyalgia, insomnia, acute gastritis, depression, anxiety, Parkinsons and Alzheimers are only a few examples. The program enables you to browse the strains by the name, by the first letter and by breeder, all from shortcuts in the main window. You can view the buds and leaves of the plant, as well as the chemical composition of the plant. Additional information regarding the selected strain can be found in the program's description. HD Cannabis Strain Directory Cracked Version Review: HD Cannabis Strain Directory Description: The cannabis database contains information about the cannabis strains and the distributors who sell them. The program is suitable for users who wish to acquire and grow the plants for medical purposes, each strain featuring a list of ailments that it can treat. Through the Med Finder, you can find strains that can treat one of the listed diseases; glaucoma, dystonia, fibromyalgia, insomnia, acute gastritis, depression, anxiety, Parkinsons and Alzheimers are only a few examples. The program enables you to browse the strains by the name, by the first letter and by breeder, all from shortcuts in the main window. You can view the buds and leaves of the plant, as well as the chemical composition of the plant. Additional information regarding the selected strain can be found in the program's description. What's New in This Release: - There is a separate column for the strains that have received international recognition for their medical properties. - The new Med Finder feature enables you to find the strains that can treat one of the listed diseases; glaucoma, dystonia, fibromyalgia, insomnia, acute gastritis, depression, anxiety, Parkinsons and Alzheimers are only a few examples. - A separate column indicates whether the selected strain received international recognition for its medical properties. Download HD Cannabis Strain Directory today!Q: How can I get a custom query with Activerecord using an array? How do I do the equivalent of the following query using Activerecord?

Keymacro is an MD6 registered keyboard macro script application which allows you to automate repetitive tasks on the computer such as keyboarding, copy and paste, application launching and opening programs. Keymacro can record one or multiple macros as well as play them back again and again in one click. You can control its functionality by changing macro-playback parameters. Keymacro has a built-in scheduler that allows you to setup the repetitions with custom intervals. It also comes with a tool to prevent recordings of any keys, such as caps lock. You can also define which keyboard keys should be left and right handed. It also offers support for command lines, which allows you to perform multiple actions in one command. Keymacro comes with a set of ready-made basic macros that perform common actions on the computer, such as copying, pasting, launching and opening programs, and more. It is possible to record macros from any keyboard keys or at the command line. The user can enter macros manually or import them from an Excel file, Text file or CSV file. The imported macros are saved in the file named "macro". Keymacro comes with a scheduler, which is a program that automatically performs macros in a predefined frequency. The scheduler can be used from keyboard shortcuts as well as from the command line. The program comes with more than 150 built-in macro types that are performed by every keyboard key or at the command line, and enables to record and play back the macros manually or at the command line. ABOUT KEYMACRO Keymacro is an MD6 registered keyboard macro script application which allows you to automate repetitive tasks on the computer such as keyboarding, copy and paste, application launching and opening programs. At the top of the program's main window, you will find a list of important information about the program, as well as the developer's description, release date and site. In the left column, the program offers quick shortcuts to the strain entry or to the Med Finder, while in the right column, you can navigate through the website of the strain supplier. The options to open the program can be set to your preferred hotkeys. Additionally, the setting allows you to choose whether the program should be active by default. The program offers an option to launch it in the background, so that it does not take the focus of the desktop and does not disturb you with pop-up windows. After launching the program, it offers two options: either you can work with the program or open the strain encyclopedia. A couple of seconds after starting the program, the main window will display the list of search options. Through this window, you can search the database entries, by strain name, by the first letter, or by breeder. The program offers a powerful search engine that will retrieve the best results for your request. If the results are not satisfactory, you can click "advanced" and set different options, such as the search range, the type of information, the order of precedence. Furthermore, the option allows you to specify particular criteria, such as the age of the strain, the storage time, the winning, whether it is sativa or indica or autoflowering, the sunlight or the condition of the plant. At the top of the program, you can set the search preferences for the whole database. Additionally, you can change the size of the displayed data, so that you can browse the database entries more conveniently. The tabs on the left side of the window allow you to access the key functions of the program, such as the history, saving the references, activating the browser, bookmarking the database entries, opening the downloaded table with all the strain information, and to shut down the program. When you activate the browser, the program will show a quick menu with the predefined Strain Search shortcuts. If you select "Search Database", the program will proceed to navigate through the database entries and will display the selected strain in the main window. The strains can be viewed in a tabular form, with the plant attributes listed on the top of the page, followed by the strain name, its origin, name of the bre
