I have a zd800 personal use, and I would like to plot on it but I couldnt find any hardware to connect to it. The closest I could find is this: any suggestions?? Thanks A: I have not tried the driver you found, but I found a driver for the similar one, it supports also the JK721: It is the first result that shows up in a google search, for instance: Also the source code should be available. Stacking of aggregates in aqueous solution of neutral polysaccharides of marine origin. Stacking of aggregates in aqueous solution of two natural polysaccharides with a different shape and size (POP1: acidic heteropolysaccharides of marine origin, and PNF-abundant: positive charge neutralized PNF) was studied by dynamic light scattering (DLS) and scanning electron microscopy (SEM). Results showed that the size of hydrated POP1 aggregates was smaller (10 ± 2 nm) and lower than for PNF (15 ± 3 nm), while POP1 started from the first laser irradiation, and PNF after 1 h of stirring. POP1 aggregates were able to stack on PNF aggregates, by means of hydrophobic interactions between the aliphatic chains of POP1 and, to a lesser extent, between POP1 and PNF, leading to larger aggregates. The maximum size of the POP1 aggregates was the sum of the size of two components: the POP1 cage and the PNF-POP1 complexes 3da54e8ca3
