Xbasics GlassShot Crack+

xbasics GlassShot Cracked Version is a handy application that was created in order to help you capture snapshots of active windows or your entire desktop. It is small, fast, allows you to save the captured image in multiple different image formats. xbasics GlassShot includes a function to resize the windows on the desktop to the correct size and allows you to perform different types of post-processing operations. You can even crop the captured image to remove the areas you don't want to view. xbasics GlassShot has been created using a simple, clean and easy to use user interface. It is designed to work with both 32 bit and 64 bit versions of windows XP and Windows 7. Its 'zero footprint' architecture allows you to install the application without any issues. The application checks for the presence of Java prior to execution, so if it's not present it will automatically download it from the web. xbasics GlassShot is a very simple to use application. You don't have to download any additional data or install any additional software in order to use it. You simply need to double-click the xbasics.jar executable file and the application will run. You will find the following screenshots taken by my notebook which is running Windows 7 32 bit. Please note that the screenshot was taken from the 32 bit version of the application as the application has been optimised to work with Windows 7 32 bit. It's a small application which can be quickly accessed from your desktop tray area. The interface supports both mouse and keyboard navigation. There are no additional options as the application performs exactly what it is designed to do. When the application is started a window is opened and you are given the option of choosing what type of active window you want to save a snapshot of. You are presented with the different categories. Each of them displays windows of a particular type, which you can select either by clicking on the category or opening the drop down menu. You are then presented with the list of windows belonging to the current category. You can choose a particular window by clicking on it. You can then select the mode of capture you want to use. You can choose to save the active window in either of the following two modes: 1) SnapShot: This mode captures the current window in full screen mode. 2) SnapShot: This mode captures the current window in an image but keeps the window in its current position. This is useful for proofing when you need to step through the process of what happened on the desktop.
