Organizing Your Work When you create new documents in Photoshop, it opens to a default (black) workspace. You can choose among several workspaces, which help organize your workspace and enable easier navigation. To change your workspace, choose Window⇒Workspaces. After you choose your workspace, the toolbar changes to suit your workspace (see Figure 3-1). The menu under the workspace selection bar is also changed to match your current workspace. You can also change workspaces by choosing Window⇒Workspaces from the application menu, shown in Figure 3-3. The type of workspace you use determines your tools, such as the Quick Selection tool and the Eyedropper, which you can use to quickly pick out areas of a photo and then copy and paste the selection into another location. Many tools are only available in specific work spaces. FIGURE 3-1: Select the workspace you want to use to organize your workflow. One of the workspace options in Figure 3-1 is the Pages workspace, which is designed for double-page layouts — a perfect way to create a series of slides. It can be accessed from the Pages workspace icon on the workspace selection bar. # GETTING HELP Photoshop is loaded with tutorials, but not every user has the time to study all of them. It's a good idea to know the most commonly used tools and even what each tool does, so you can better navigate through the tutorials. Several tutorials on the web help improve your Photoshop skills. If you're struggling, look online for tutorials to increase your understanding and confidence. If you lack time or bandwidth to look at tutorials, consider downloading the _Photoshop CS6 For Dummies_ guide (www.dummies.com/id/photoshop-cs6-dummies/), which covers Photoshop from start to finish, along with useful demos. ## Finding Your Way with the Working Area In a typical Photoshop project,

However, it's not the most popular or new photo editing software, and we recommend using a professional-level photo editing software such as Adobe Photoshop Elements as your first choice. Regardless of which tool you use, here's a list of the most important Photoshop Elements features for photographers. Edit Images on the Go You can easily edit and resize photos when they're on your phone, tablet or PC. With the TouchUp mobile app for your iPhone, iPad or Android, you can edit more than 200 different image types with ease. Your edited photos will then be sent to your phone for sharing with your friends and family. "Everything's on the go, and you just have to be connected," says Steven Woods, creative director at SitePoint. Smart Objects The Smart Objects feature lets you make selections on an image and then create a new document from that selection. Once the new document has been created, you can then edit the image inside the new document with your tools of choice. You can create a new version of the Smart Object in a variety of ways: with each edit, different selections, variables, or even after saving as an individual file. Editing Progression and Retouching Photoshop Elements' editing progression gives you the option to select how many changes are made to each photo. For instance, if you want all your photos to look like they were shot with a large aperture, you can select that option and make the edit on your photo without changing any other things like lighting and/or shadows. Adobe's editing progression can also be set to make a small number of edits to a photo. You can also choose which Photoshop Elements tools you want to edit each photo or even create custom photo editing apps. Edit with Photoshop Elements You can edit photos with Photoshop Elements. More than 200 different filters and special effects are available to you, including: Effects that can turn a photo into a dreamy photo, an artistic photo or a vignette Cool and warm filters that can make your photo look like it's covered in a mist A wide selection of special effects, including a Bevel and Emboss Effect and Dreamy Photo Filter Photoshop Elements also includes Layers. Layers allow you to edit one part of a photo without affecting other parts of the a681f4349e

Q: Is there any way to identify users in a Rails application from the database? I think everyone who's been programming for a while knows that it's bad to store any identifying info in the database. But in the early days of Rails, some of us couldn't make up our minds fast enough not to. We had to identify users through some hidden app specific field in the database and deal with duplicate passwords. Since version 3 of Rails, it seems possible to easily (and, as far as I know, securely) to identify users based on their IP address, browser, or some other relevant information. That said, here's my question: Is there some way to even identify users based on the app they're using, or an association to a given model? I ask because I'm the second engineer on a project and I have to write an interface for users to register with the system. I'd like to avoid storing their e-mail address in the database because that creates a vulnerability for phishing. I know that it's not a viable option to require users to create their own account (since that's the point of the application). I'm not interested in ways to identify the user in the View, such as , because that doesn't actually identify the user. It just allows them to identify Bob Smith on the fly. A: I think your point is a valid one, and it's why I've always been careful with a "users" table in my own applications. In your particular case, you can use gravatar, or just require a fresh avatar for each registration. You can store e-mail, but use a service such as gravatar.com or ses@mail.yahoo.com for verification. As a practical note, some services such as Facebook.com now use e-mail addresses, and that's a legitimate strategy. As noted in the comments, security is not a simple "black and white" issue. If you're doing something you consider worthy, you must do the proper research. However, that doesn't mean to not get started, "perfect is the enemy of good". As far as it goes, the Basecamp folks did it, and it seems to be working well.

Team Fortune Team Fortune was an American soccer team based in Beachwood, Ohio and playing in the USL PDL, the fourth tier of the American Soccer Pyramid, until 2008, when the team went on hiatus. The team was founded in 2005 and has been a member of the USL PDL since 2006. The team played its home games at Nick Tamburro Stadium in Beachwood, Ohio. The team's colors are navy and white. Comment, supra, at p. 542; and see H.L. Moore Drug Exchange v. Eli Lilly and Co., 570 F.2d 696, 703 (2d Cir.1978). Even if the jury's award could be properly characterized as "grossly excessive," the Appellee did not object on this ground. See, Walker v. Bennett, 165 U.S.App.D.C. 220, 228, 506 F.2d 1146, 1154 (1974). The State argues, in the final analysis, that the jury's award was not "grossly excessive" as a matter of law because the jury could have awarded damages for a later, undetermined period of pecuniary loss. This argument proves too much. While it is axiomatic that damages need not be limited to pecuniary loss, the only evidence of such loss here ¶ the Appellee's having had to work at a lower hourly rate ¶ related only to the period during which she was allegedly liable, and had been discharged. The jury's award was therefore limited to the time of discharge. And we are at a loss to see how the jury could have rationally believed that the evidence justified damages for the Appellee's alleged loss of earnings beyond the date of her discharge. Conclusion We vacate the judgment below and remand the case for further proceedings consistent herewith. So ordered. NOTES [1] At trial, the Appellee asserted that her contract of employment was one for lifetime employment with the Appellant. The App
