AutoCAD

When used as a desktop app, users sketch and edit the shapes of 3D models, create plans for buildings and other structures, and edit the appearance of 2D drawing objects. It was the first mainstream CAD application for desktop computers and a key application in the so-called desktop revolution, as desktop computers became common and CAD software was ported to computers running the Microsoft Windows operating system. AutoCAD has since been ported to many computer operating systems, including Apple Computer's macOS. AutoCAD is useful for creating 2D drawings and 2D and 3D drawings, as well as 2D drafting. It is especially used for creating 2D building plans and 3D models for buildings and other structures. AutoCAD is also used in civil engineering, construction, architecture, and mechanical engineering. AutoCAD is an architecture and engineering software system that includes a 2D drafting, architectural design, and 3D modeling application. Its primary purpose is to create 2D and 3D building blueprints and 3D models. As the world's leading 2D-to-3D modeling solution, AutoCAD is used by architects, designers, engineers, drafters, contractors, builders, and contractors. As the only industry-standard 2D drafting application, AutoCAD is used by all construction disciplines, including civil, mechanical, and electrical engineers, and construction trades. The software is one of the most popular 3D modeling applications in the world, as well as a leader in architectural and engineering solutions. AutoCAD is a registered trademark of Autodesk, Inc. About Autodesk Autodesk, Inc., is a world leader in 2D and 3D design software for the manufacturing, building and construction, and media and entertainment markets. Since the company's introduction of AutoCAD software in 1982, Autodesk has developed the broadest portfolio of state-of-the-art software for planning, visualizing, and authoring all aspects of manufacturing and construction, including indoor and outdoor, commercial and residential. Autodesk's continued innovation has led to broad market adoption of its software, making Autodesk the de facto standard in 2D and 3D design and an industry leader in parametric design and product lifecycle management (PLM) software. In 2012, Autodesk acquired world-renowned animation studio, The Mill, to further enrich its leadership position in design and entertainment software.

Public API The program also provides a command-line interface through the Help and Utilities menu, where a number of command-line functions are available. These can be used to write scripts that automate processes. For example, the EXTOL() function is used to turn a multi-row text object into an extruded line. The syntax for this command is: EXTOL(row_start, row_end, [column_start, column_end], [row_count]) This code inserts a series of straight lines at a specified XY coordinate between the specified rows. It is identical to the LOXOL() command except that it uses a column to control the spacing between the lines. A scripting language called AutoLISP was introduced in AutoCAD 2010. AutoLISP is a high-level programming language, based on LISP. It provides the user with the ability to write scripts that can automate repetitive tasks. There are two ways to write a script: the step-by-step process, or the AutoLISP programming environment. AutoLISP requires familiarity with the programming language, as it provides a logical way to write code in a structured environment. The commands and variables that can be used in a script are all identified and grouped in alphabetical order under the LOAD() function in the object's Properties window, so the user can see what is available. AutoLISP also supports an extensible syntax that allows programmers to access objects and functions that were introduced in AutoCAD 2012 through the use of extensions. These extensions can be downloaded from the Autodesk Exchange App Store. More information on AutoLISP can be found in the official AutoCAD Documentation. In AutoCAD 2010, an API extension, called AutoLISP, was introduced to allow programming by calling AutoCAD functions. There are also new AutoLISP commands that help to simplify the use of AutoLISP. Private API At the lower level of the AutoCAD application programming interface, AutoCAD provides a set of APIs called Adaptive Application Programming Interface (Api) by the AutoLISP programming language. In AutoCAD, these APIs form the basis for products such as AutoCAD® Architecture (AIA) for creating building architecture drawings, AutoCAD® Electrical (AEC) for creating electrical drawings, AutoCAD® 3D Interiors (A3D aid647c40b

There are three types of network connection available in Autocad: Internet Intranet Local Autocad can access a network drive through either the local network or the internet. On Windows 2000 and later systems, selecting Internet will automatically make the Autocad database synchronize with Autocad on the network, then the database will also automatically refresh itself each time Autocad is started. The Local option is available only if Autocad is installed on the same system where the data is located. Local uses a local database (MDB) file that resides on the system where Autocad is installed. When the database is updated on the local system, the updated version is synchronized to the Autocad database. Jody Moser, 37, who's been associated with the Klan since he was a teenager, was sentenced to two years and six months after pleading guilty to misdemeanor assault and battery charges from a November 2017 incident. Charlottesville police charged Moser and William Fears, 46, with second-degree assault, simple battery and rioting after they were recorded appearing to beat a man at the protest. Mosher and Fears were among dozens of white nationalists and neo-Nazis that held a rally that ultimately turned violent, resulting in the death of a counter-protester and injuries to multiple others. Moser and Fears were among a group of neo-Nazis and members of the so-called "alt-right" who marched on the campus of the University of Virginia, carrying weapons and shouting racist slogans. Moser carried a rifle, while Fears carried a shield. Both
