Q: Retrieving server relative URL in ASP.Net MVC I am building an application that will need to pull information from a server that is host-based relative (as in, the application is hosted on one server and the data is on a different server). My problem is that MVC requires absolute paths, and the server's path (ie. the site's physical path) is not the same as the client's path. Is there any way I can access the physical location of the site on the server? A: You can't, really. If you need to have the URL look something like "~/some/relative/path/to/file.aspx", then your site needs to be running on the same server as your file. However, if you only need to get the filepath you could add a route to your web.config file: Basically, this will make any URL that starts with a slash / that is not the root of your site (it'll ignore your /some/relative/path/) be rewritten to the physical path of that file on your server. Q: Does a helicopter still need to take off in level flight if it has completed takeoff and is still going up, but is in a descending spiral? I am wondering if a helicopter needs to be in level flight if it has completed take off, but is descending with engine power and is still going up, so the rotor blades are still moving faster than the air. Thanks, A: The application of the normal take off rule is to assure
