Autodesk AutoCAD is a Commercial Computer-aided design and drafting software application. Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. History of AutoCAD Development AutoCAD was the first commercial desktop computer-aided design software application that uses the input and output capabilities of the personal computer to allow easy access to drawing design data. CAD programs were historically command-driven, but AutoCAD's graphical user interface and point-and-click interface made the application's approach to drafting easy for users. The development of AutoCAD was started in 1981 by Gary Johnson, who worked for CAD Systems, Inc. (later Autodesk), and was released in December 1982. AutoCAD is based on the "preliminary specification" for a commercial CAD system that the former U.S. Department of Defense released in August 1981. At the time, the specification was known as the U.S. Department of Defense CAD Standard (DD214) and was the basis for a number of other CAD systems. Autodesk had a working version of the software by the time it received DD214. Autodesk used the DD214 as a baseline for the first version of AutoCAD, which they completed in the summer of 1982. The first public demonstration of AutoCAD was held at the 1982 American Society of Draftspersons convention, where it was announced that DD214 was to be released as a commercial CAD system. The initial prototype for DD214 was a program known as CADDAS, which had been developed by Johnson and his team at CAD Systems. Early adopters of AutoCAD were primarily government and commercial contractors, who were typically interested in using a system that was tailored to their specific needs. The vast majority of AutoCAD users are accountants, engineers, architects, and construction contractors. By 1997, more than 50 million AutoCAD files had been created. The number of files produced by the program has continued to increase. According to a 2006 survey, 64% of users surveyed said that they use AutoCAD. Of the users surveyed, 19%

AutoCAD Architecture (AIA) AutoCAD Architecture was a program that could be used in architectural design, producing a 3D model of the building that could be analyzed, manipulated and displayed on-screen. It was replaced by the introduction of AutoCAD Architecture LT (Autodesk Revit Architecture) in 2008. History The original AutoCAD used the plain raster-based DXF file format. In the 1990s, the file format became more reliable for supporting 2D CAD data such as floor plans and 2D drawings in addition to 3D models. 5b5f913d15
