This plugin exports the

building model to a stereolithography (STL) file, which can be uploaded into various CAD software such as ArchiCAD. Release Notes: This plugin adds new options for exporting to 3d files: - Add support for exporting to.obj files. This is enabled by default. - Support for exporting from ArchiCAD. To export a model from ArchiCAD, you must select the ArchiCAD export option.

- Remove the constraint that exports should be done from the Layout tab. - Add a new export option for 3ds Max. To export a model from 3ds Max, you must select the 3ds Max export option. Changes since Release 1.2: - Fix a bug where exporting from 3ds Max did not work properly. - Fix a bug where if you use the ArchiCAD export option, and a model has components that are not a part of the

model or model's scene, the exported file may not load correctly. - Fix a bug where the cursor for the Export-from-ArchicAD option may disappear. - Fix a bug where the "On Export" option in the Export-from-3ds Max option does not fire. - Fix a bug where exporting with the 3ds Max export option would not save the.3ds model. - Correct a bug that could cause a crash if you export from

ArchiCAD and 3ds Max at the same time. Release Notes: This plugin adds new options for exporting to 3d files: - Export a model to 3ds Max. Risk of Falling Out Oral
Health Risks in Seniors
Posted on April 13, 2016
May is Oral Health Month,
and it's a great time to
remind people of the good
habits and behaviors that can
help avoid oral health
problems. Let's start by
talking about teeth, because
they're so important. The
U.S. spends billions of
dollars on dental care each

year, but over 75 percent of adults in the United States don't get the recommended dental visits, and of those who do, most don't have their teeth checked for the four or five years that are recommended. Tooth loss is the most common reason people visit the dentist. As a result, they are at increased risk for gum disease, tooth loss, and even lost teeth. It's not hard to see why a lifetime

of poor oral hygiene is so damaging. When you lose teeth, you not only lose your ability to chew properly, but you also have more difficulty with speaking and chewing food, and you may also have difficulty chewing or swallowing medications. Smoking is a major risk factor for developing periodontal disease. If you are a smoker, you should absolutely see your dentist

more often than recommended and get your teeth checked for gum disease. Your dentist can give you a better idea about what you can do to avoid this problem. Another risk factor for tooth loss is diabetes. If you're diagnosed with diabetes, your dentist can help you learn how to maintain healthy gums. We all know the importance of regular dental visits, but there

are other good habits you can develop to avoid problems.

The American Dental Association suggests that children should have their first dental visits at age one, two and three. The first visit usually involves a thorough cleaning of the teeth and gums. One of the

and not separated by component type. * The geometry can be exported to a separate file for each component type * Export without comments can be used to remove comments from your imported geometry * Exporter can export meshes with negative number of polygons (holes) * Export meshes with a single mesh / face. * Export geometry as a single file /

single component, which can be exported to another format (gcode) * Exporter offers a configurable, non-contiguous mesh split feature. * Exporter allows you to export geometry to g-code format, the dual cut tool to gcode, and the g-code triangle format. * You can export geometry for the entire project, for individual components or for each region of the geometry. *

Export to a single file or to multiple files. * Export the "core" geometry that you need for a particular part. This feature is useful when exporting geometry that needs to be printed on its own. * You can export selected components to a single file. * Export multiple components to a single file. * Export with comments (export data as a comment) * Export meshes with negative
