Naming a drawing During the earliest stages of AutoCAD's development, users typically created a drawing with the name of the first drawing they created. Some very early users also had their own unique naming conventions. As AutoCAD became more popular, the number of users grew, resulting in some naming conventions evolving into formal standards. The more traditional names for a drawing include the initials of the user, followed by the day, month, and year in which the drawing was created, as in MDA14.1. This type of naming scheme is by far the most common. Beginning with release 2002, AutoCAD allows users to choose a custom name for their drawings. This means that you can use any letter of the alphabet and any combination of letters, numbers, and hyphens. You can also specify an abbreviation of the name you select for your drawing, like crd for a customer record drawing. To create a custom name for a drawing: Choose Manage Data from the Manage tab. Click the Create Drawing button. Specify a name and other options for the drawing. For more information about creating a custom name, see [Customize drawing names](#).

In recent years, there has been increasing discussion on the definition of diversity within higher education. Multiple definitions of diversity have been proposed and discussed, and many continue to argue about the merits of various definitions (Rosa & Chant-Niranjana, [cit0029]; Socol et al., [cit0033]; Valencia, [cit0040]). Two definitions that have gained prominence are the racial diversity definition (RDB) and the ethnic diversity definition (EDB) (Van Tassel-Boink & Bowen, [cit0037]). Both of these definitions focus on the ways in which faculty and staff of color are distributed in higher education settings. However, faculty members of color are not distributed evenly throughout the entire higher education sector (Jones, [cit0018]; Power, [cit0026]). In the United States, for instance, the racial composition of assistant, associate, and full professors is similar, but the racial composition of tenured and untenured associate and full professors varies greatly (Kanfer, [cit0020]). If diversity refers to the distribution of faculty of color within higher education institutions, then why do faculty of color not have equal distributions? The intersectional approach has been used to describe issues such as gender, race, and class (Collins, [cit0006]; Pilditch & Randall, [cit0024]; Wahome & Hester, [cit0038]). Intersectional approaches hold that one's identity or membership in multiple categories (e.g., race, gender, class) have the potential to impact one's identity (Collins, [cit0006]). Intersectional approaches have the potential to capture the varied experiences of faculty of color within higher education,
