What is AutoCAD? AutoCAD is a 2D drawing software application that has been in development since 1982. The name refers to the name of the company that first developed the software, Autodesk, the name Autodesk was inspired by the first two letters of the words, Autocad. Autocad is a term used by Draftspersons to describe the act of drawing a blueprint in CAD. In the same way that engineers may use an engineer's ruler, or draftsmen may use a drafting compass, architects and engineers may use CAD for similar purposes. AutoCAD is most commonly used for designing computer hardware, such as machines for machining or printing, components and drawings for other engineers or architects. The application has been traditionally used for architectural, mechanical, and construction drawings. Although the product is often confused with other CAD packages, AutoCAD is quite different. The software is used to design buildings and other structures as well as vehicles and mechanical devices. It is used in transportation, architectural, engineering, manufacturing, and landscaping applications. AutoCAD is a powerful and comprehensive drawing package. Some of the more popular AutoCAD functions are listed in the table below. function Display location of objects on the screen Display rotation and location of objects on the screen Display the selected object's properties Select objects on screen and display their properties Enable and disable layers Set the current unit of measurement Create and modify objects Control editing tools Control drawing tools Set the drawing area size and location Select paths, curves, and other line objects Fill, stroke, and texture AutoCAD and Architectural Sketching The architectural CAD world is a fast-moving one, with an ever-changing set of software tools that are used to create architectural designs, including 3D models and 2D drawings. AutoCAD architectural design software has evolved from a simple drafting program into an advanced set of tools that are designed to help architects and designers produce drawings quickly and accurately. In the table below, you can find a list of the AutoCAD features that are used for architectural applications. Legacy AutoCAD has evolved over the years into a series of products covering specific niche areas. Some of the products in the series are listed below: Imageworks In July 2003, Newtek bought rival AutoDesk from NCR Corporation and integrated the products under the ImagiGraphics brand. The company focused on producing specialized technical and engineering 3D applications. In 2007, Newtek spun off ImagiGraphics and renamed it to Imageworks. In February 2013, Newtek announced that it was being acquired by Autodesk, Inc. Products AutoCAD The company's flagship product is AutoCAD, a drawing software. In May 2010, Autodesk acquired services and support for AutoCAD from Luxoft in a $300 million deal. The price included royalty fees, a $250 million payment and the assumption of $35 million in debts, according to a press release from Autodesk. The acquisition gave Autodesk a presence in the graphics market. The business was led by Daryl Wellwood, who had been with the company since it was acquired by Autodesk in 2004. AutoCAD is divided

into several suites, including AutoCAD Architecture, AutoCAD Electrical, AutoCAD Civil 3D, AutoCAD Mechanical, AutoCAD Plant 3D, AutoCAD Landscape, AutoCAD Motion, and AutoCAD Visualization. The AutoCAD Architecture suite was discontinued. Customers AutoCAD is used in a variety of industries, including civil, engineering, industrial design, architecture, mechanical, architectural, and interior design. As of October 2007, the software was installed on more than 80 million computers, including more than 200,000 CAD workstations. AutoCAD is supported by the software development tools: Navisworks Grasshopper Revit Map3D Building Center Support Autodesk provides continuous updates for the software. The company also offers add-on services such as training, consulting, and professional services. In 2017, Autodesk released Autodesk Navisworks v11 to replace Navisworks Viewer, Revit Architecture and Revit MEP for visualization and editing. NeuralNetwork It runs for multiple epochs on a training set, at each epoch averaging the last value, and printing the average. If I have two examples x = [10, 10], y = [1, 0] and run this for a few epochs, the output is all zeroes, why? A: From the documentation: InceptionV3 depends on conv2d to perform the inception layers and max_pool2d to perform the second max pooling. So, in your case, since you have only a single convolution, you have no other nodes to feed data. However, the network has two inputs. The result
