## RepoZ (April-2022)

Learn how to open a repository on Bitbucket. RepoZ is a lightweight piece of software that addresses developers who need to keep track of the online repositories on GitHub, BitBucket, Stash or other similar websites. The app enables you to jump from one project to another in just one click, so you no longer need to keep dozens of windows open at the same time. Comes with extensive support for command line. The utility does not come with an interface per se, but rather you can access it from the System Tray upon launch. After a brief scan, the application displays the repositories you are working on the current computer, a feature that can come in handy for developers who need to keep dozens of windows open so that they can access the desired repository whenever necessary. The highlight of the tool stems from the fact that you can jump directly to the repository path via a command prompt or a file browser. In fact, the program comes with a handy utility dubbed grr that can help you make the most from the commands, meaning that you can open files in repository directly, list data following a pattern or filtering for a certain name. Last, but not least important, the app is capable of detecting the File Explorer repository windows that you have open and can add a status appendix to their title. As you probably hinted, you need to install grr to take advantage of the latest feature. A tool that can simplify and speed up the way you work with repositories. It is worth mentioning that the program may appear to be stuck when you launch it for the first time. In reality, the application is scanning your computer to find files and folders that are likely to be a repository. In the eventuality that you are working on dozens of app development projects at the same time and you are having a hard time switching from one to another, then RepoZ could come in handy. Not only can you preview all your repositories along with their status, but you can jump directly to its path so you can make further modifications.
