A python script that is used to quickly decode a set of Rijndael/AES keyfiles into a list of new keys. These keys are then used to perform some simple encryption/decryption operations and are therefore, the basis for the set of MEGA.EXE tools, which enable you to encrypt/decrypt files. In case you are using the MEGA toolbox, these scripts are used to create some temporary encrypted/decrypted files, that are then used by MEGA.EXE to decrypt/encrypt your original files. Hint: To run this script you will need to download the Rijndael software, which you can get from here Support: MEGA Forums.
