## MintDNS Enterprise Crack+ Inel Product Key

MintDNS Enterprise is a robust DNS updater written in C++, and designed to offer unlimited users a completely scalable Dynamic DNS service with full support for many existing and new updater clients. It is completely template based, so the look and feel of your DNS service can easily be changed to match your existing website or modified to suit your specific needs. With this unique system, you will be able to run your own enterprise level Dynamic DNS (DDNS) service and give your users or devices the ability to create and manage unlimited DNS records. You will also be able to offer the internet community Dynamic VPN gateway services, and the ability to do just about anything a person with a static IP address could do with his or her computer. The only real limits are the amount of server resources you dedicate to your DDNS service. Fully NLB/Cluster compatible, MintDNS features automated DNS and database failover. With load balanced servers and a P2P SQL configuration, MintDNS becomes an "add server" solution ("Outgrown your setup? Just add another server"). MintDNS Enterprise main features: No need for any existing DNS clients. Just plug in the ddns.org updater, and MintDNS will handle the rest. Completely scalable, you can have as many virtual hosts running on your servers as you need. No limits, with a very flexible template based design you can make your DDNS service look and behave exactly like you want. SSH update authentication. Never worry about your client's passwords again. Supports virtually any firewall and firewall-based client. This means you can offer DDNS service to your own users or if you have an external service such as a VPN then you can now offer it to your clients too. A central point of control that can be managed from the web interface. Simply add a server, and MintDNS will handle all the DNS updates for your network. Reliable and fully available. Extremely efficient. Written in native C++, this new generation update engine never slows down, uses less memory, and makes the minimum amount of noise possible. Template based design, give you complete control over the look and feel of your update service. As part of the template based design, you can mix and match three different template styles to create a new template. This is perfect if you want to create a template based on a specific website or specific device. Supports most (if not

## What's New in the MintDNS Enterprise?

MintDNS Enterprise runs on Windows 2000 and later operating systems. It is based on the "Free" edition of Microsoft Active Directory but, unlike other products of its kind, the MintDNS Enterprise license can be acquired in a fully integrated and single package deal. MintDNS Enterprise also runs on Windows 2008. The MintDNS Enterprise database supports Microsoft SQL Server and other database managers. The MintDNS Enterprise package can be installed on as many servers as you like, and it is designed to work great with load-balanced servers. The MintDNS Enterprise GUI can be installed on one machine and set up to act as a front-end for multiple MintDNS Enterprise servers. Our team is very active in the community, frequently answering questions via our Live Support Forum, our User Forums, Twitter, or our IRC channel on FreeNode. What the Community says: "MintDNS is an amazing piece of software. I've used it for years on sites I've managed (and on sites I don't). It's probably the most critical piece of software I have on any website I manage, and I've been lucky to work with companies that share this opinion. The UI is a bit weird and takes some getting used to, but it's absolutely functional. I highly recommend this software to anyone in this business." -- Larry S. "MintDNS Enterprise is an invaluable resource for all IT professionals, regardless of their expertise level. Our network of very helpful volunteers runs an active community of helpful people who always are ready to answer any questions you have about dynamic DNS, network security, routing, and more. It's definitely a product that will be supported for a long time to come." -- Matt "I've used MintDNS for a long time and I've always been happy with it. I love the design, the ease of use, and the support they provide. It's a little weird that you can just add a DNS server, but the MintDNS interface doesn't make it look that way. It's easy to set up and it works like a charm." -- Gerardo "I love MintDNS. It's one of the best free DNS services out there. I've used other paid ones in the past, but these guys stand head and shoulders above the rest." -- Dempa "The MintDNS user forum is terrific. I've used free and paid services in the past and MintDNS's user base and support go far above and beyond. I love that MintDNS supports third party applications like our own, SoftwareFirewall, and that they have an API." -- Jay "I've used MintDNS in the past and it works really well. They have an active user forum and community, and their support is fantastic. Highly recommended." -- Christophe "MintD
