CryptoLicensing For .Net With License Code Free

Restrict the license to certain websites in a few clicks Generate either a simple license or a license with full features Configure and use many licensing options and settings Easily generate licenses in the custom format Simple and intuitive interface Execute license codes via URL The license codes you create and distribute will be randomly generated. You do not need to worry about anything and you can just use the license codes to activate or deactivate your license. If you are not satisfied with the results, you can generate a new one. CryptoLicensing For.Net Screenshots: CryptoLicensing For.Net Pricing: CryptoLicensing For.Net Pricing: CryptoLicensing For.Net is available for \$39. Try CryptoLicensing For.Net free. If you like it, you can buy it right now. CryptoLicensing For.Net Review: CryptoLicensing For.Net is a software solution that can help you add licensing options to your Visual Basic.Net software, such as WPF applications, Windows services, ASP.Net web sites and others. It can generate secure cryptographic licenses that offer protection to your software, as well as the websites that may be hosting them. A simple interface for the common user The user interface is clean and all its functions are neatly displayed in the main window. You can create licenses for full versions of your software, evaluation or trial versions, online or manual activation, network floating licenses, on-demand, subscriptions and hardware-locked. It is possible to create evaluation licenses by configuring the dedicated parameters, such as the absolute date when the license expires and maximum usage days, unique usage days, executions, run-time and cumulative run-time. Create and edit your own licensing rules You can also make the app limit the license to specific domains and embed additional notes in the license. The application allows users to define many license features which could enable or disable different functions in your software (e.g. standard, professional and enterprise edition). It is possible to set up different settings that can help you generate licenses for the current profile. Moreover, license and serial codes can be generated via code. The usage reporting feature helps you determine the usage patterns of your software, such as the duration each feature is used for and the most common hardware and software configurations. Restrict the license to certain websites in a few clicks

You can use it on Windows from the Windows Vista and Windows 7. Simple Software User Interface CryptoLicensing For.NET allows for creation and editing of licenses. You can create licenses for full versions of your software, evaluation or trial versions, online or manual activation, network floating licenses, on-demand, subscriptions and hardware-locked. License Features CryptoLicensing For.NET allows you to configure licensing settings such as licensing classes, license types, license keys, run-time expiration, license usage, the expiration date for each license type, number of licenses available in case of concurrent licenses, lifetime, and number of usage days. License and Serial Code Generation CryptoLicensing For.NET generates license codes with a specific number of characters, depending on your license class, license type, expiration date and license usage. License and Serial Codes are embedded directly into your software and are secured by password. License codes are stored in the License Manager database. License Features CryptoLicensing For.NET is delivered with a number of useful features that can enable or disable different functions in your software (e.g. Standard, Professional, Enterprise editions, run-time and maximum usage). License reports CryptoLicensing For.NET generates extensive and detailed reports, showing the functionality of your software on the system, the hardware and software configurations, licenses and license codes. License and Serial Code Management License codes can be managed and managed using the option to set the maximum number of generated licenses. License expiration The license expiration date is a mandatory feature, since licenses must be removed from the system after expiration. CryptoLicensing For.NET offers an expiration date range option for each license type. License Implementation in .NET CryptoLicensing For.NET provides support for license identifiers in your .NET applications. This feature allows you to automate the creation of license codes with the use of .NET application deployment. License Code Management CryptoLicensing For.NET provides you with the tools that can make tracking license codes much easier. Every license code is linked to the profile, to the License Manager database and the license owner, and can be removed as needed. License Tracking CryptoLicensing For.NET allows

What's New In CryptoLicensing For .Net?

CryptoLicensing For.Net allows you to easily add licensing restrictions to your Windows application. It features an intuitive and flexible user interface with which you can create licenses for full and trial versions, online and manual activation, network floating licenses, on-demand, subscriptions and hardware-locked licenses. You can also make the license expire on a specific date or run to a specific number of days. You can create licenses with various settings, including URL restrictions, expiration date and maximum usage count. CryptoLicensing For.Net helps you easily control the license and allows you to restrict it to certain websites or websites belonging to a particular domain. Key features of CryptoLicensing For.Net:

- Create and edit licenses for full and trial versions;
- Create licenses with URL restrictions;
- Make the license expire on a specific date or run to a specific number of days;
- Create license for active or deactivated user;
- Generate license code and license serial code;
- Add license notes and edit notes;
- Manage and send licenses;
- Generate single or multiple license keys;
- Advanced license management;
- Fully customizable user interface;
- Preset license server settings;
- Support for all major operating systems;
- Supports all Windows application compilers;
- License reporting and license restrictions can be activated and deactivated;
- URL restrictions can be added, and the license status can be restricted to specific websites;
- License for a single user or group of users can be defined;
- License can be restricted to only standard edition or only professional edition;
- License can be made to run for a particular time or for particular number of days or hours.

CryptoLicensing For.Net takes into account your technical needs by allowing you to define all license parameters, such as the expiration date or the number of days, your domain name, activity, product version, the URL to which the license is going to be restricted and so on. You can also add the URL to which the license can be restricted; it can be set as Active or Offline, so that it is going to be used for active or deactivated users. Thanks to the URL-based licensing, you can restrict your software to particular websites. License Restriction Demo Here is the demo for CryptoLicensing For.Net's license restriction feature. You are allowed to use it for FREE for 5 days before purchasing a license. CryptoLicensing For.Net Requirements:
