MITCalc - Worm Gear Crack + [Win/Mac]

MITCalc - Worm Gear is a simple to use Microsoft Excel add-in that enables you to calculate and analyze several types of parameters regarding worm gears. The add-in is designed to help you calculate speed, torque transmission, resistance to shocks, density, power and size of the elements. Worm gears and their usage The worm gears are metal pieces with spurred edges that enable engines and other mechanisms to rotate and produce higher torque transmission. Their size, resistance and rotation speed are essential in order to build the desired mechanism and ensure that it works properly. MITCalc - Worm Gear can help you create analysis sheets regarding several parameters of the gears. With MITCalc - Worm Gear, you can easily enter the values of the current settings and let it determine whether or not the element is suitable for your type of construct. It takes several criteria into consideration, including the resistance to water, dust, temperature or the type of oil used. The statistical reports you can acquire with MITCalc - Worm Gear can help simplify your selection of a suitable type of transmission. Control and CAD editing MITCalc - Worm Gear can help you create a full report or project for your research, by offering you the configurable tables, as well as the possibility to insert headers, annotations and improve the spreadsheet layout for printable versions. You can fill in the project name, date, number, attach documentation, drawings or notes, a small description, author's name and the internal identifier. The add-in also supports generating a 2D graphic output for a specific series of calculations. The indicated fields are accompanied by the 'Graphic output' column/paragraph, at the end of the calculation. Reliable calculator for mechanical parameters MITCalc - Worm Gear is a useful tool for users who wish to create reports, projects and informational sheets about gears or worm gears. The add-in works with Microsoft Office, a software that offers the spreadsheet configuration, which is suitable for quickly drawing up tables and filling in the fields with the required data.
