When network and system administrators first look

at Magento, they often see a spaghetti of confusing tables that requires manual effort to manage.

BitNami makes it simpler. BitNami® Magento Stack™ is an easy-to-use, self-contained software appliance that installs Apache, MySQL, and PHP, as well as BitNami's tools for Magento development and deployment. Magento (Open Source) Magento is an e-commerce open source PHP software solution with a MySQL database back end intended for commerce websites. It is based on Zend Framework and is part of the open source Zend Framework. History Magento was conceived by Rasmus Lerdorf. On 8 May 2006, the Magento team and Fabian Heck were announced as the contributors to the Zend Framework; Magento's creator also announced that Magento would be a project open to the general public at the Zend Symfony developer conference on

5–8 May. In 2007, Lars Thuesen joined the Magento project as a Co-Founder. In 2008, Thomas Domjan, Magento founder and CEO, announced that they would open Magento as an independent open source project after years of contention within the Zend Framework community over the governance of the project, and after multiple complaints filed against Magento by Joomla developers who claim that Magento infringes their copyrights. In 2009, Thomas Domjan joined Bessemer Venture Partners as a venture partner. In April 2013, Thomas Domjan and Fabian Heck announced that the former was stepping down as CEO to become the CTO of Magento Commerce. Features Magento allows e-commerce websites to be set up quickly with tools as the platform components and allow administrators the ability to make modifications as the site grows. It

is a choice for merchants who want to outsource their website management or who simply want to avoid the difficulties of creating a website. Magento makes it easy to create a webstore for online retailing. Companies use Magento to build websites as part of a full integration with their own enterprise applications. For instance, merchants can use BigCommerce and Magento to tie together their online storefronts with their e-commerce business applications. In addition, Magento helps sellers work with several different currencies, allowing for easy internationalization of products, and supports multiple languages that can be used for online shopping. Magento uses XML
