Q: Rearranging letters/characters in a string in Delphi I have a string in this format: ""barbora" I want to rearrange this string into: "Barbora" I have made a function that splits the string into characters and returns the last letter in this position (see code below). So far, so good. But my function just rearranges the string into lowercase and returns the first letter in every position. How could I fix this so it rearranges into upper case instead of just lowercase? function TCompilerMainForm.ReorderString(const S: string): string; var S1,C: char; begin S1 := S; C := S1; while (Length(S) > 1) do begin S[1] := UpperCase(S[1]); S := Copy(S1,2,Length(S1)); S1 := Copy(S1,Length(S1)+1,Length(S1)-Length(S)); end; Result := S; end; A: As you can see, it is not well explained in the documentation how your function works, but anyway.. function TCompilerMainForm.ReorderString(const S: string): string; var S1,C: char; begin S1 := S; C := S1; while (Length(S) > 1) do begin S[1] := UpperCase(S[1]);
