
Ajax Toolkit 1.1 Download Free

August 31, 2016 - I'm trying to use the new AJAX stacked bar chart control. this causes the writeback to return .total() with zero value for each entry. I know it's the .total() method, so I'm not sure what's going on. I have already tried with .total() and .total(num) as well as .total(num) but still have the same error. The code: var total = 0; // initializing the chart function init() { // Prepare the data tasks // Task 1. Fill the list with text var data = []; // Returned to initial state var result = {}; // Tokenize the data: adding new data to the array with titles for (var i = 0;
