Postscript A common way of writing AutoCAD files is with the Postscript language, which is compatible with all PostScript printers. AutoCAD is designed to be user-extensible, supporting LISP, Visual LISP, and other programming languages and environments. Open standards AutoCAD can generate drawing files that conform to the CAGD-XML drawing file format (XML wrapper of the CAGD file format) and the CAGD WXML drawing file format (XML wrapper of the CAGD eXtensible XML file format) or the.cad (CAD) file format, depending on the version of AutoCAD being used. The CAGD WXML format was introduced in 2014, in order to give users a more portable and flexible way of exporting AutoCAD drawings to other applications. The Postscript language can be used to write the CAGD XML drawing file format, the CAGD eXtensible XML file format and other drawing file formats. AutoCAD can also generate drawing files that conform to the Portable Graphic File (PGF) standard. Autodesk XML technology Autodesk XML technology is a system introduced in AutoCAD 2013 and 2014 for enabling the representation of CAD drawings in a semantic language. As with other forms of XML, the file format is intended to allow content-rich documents to be represented in a computer file.
