## Portable MesNews Crack X64

The intuitive, free and portable MesNews app provides a quick and easy way to check and read newsfeeds from your webpages, set multiple servers and groups, and send messages to your friends and acquaintances with ease. Key features: - Ability to check and read newsfeeds from your webpages - Set multiple servers and groups - Send messages to your friends and acquaintances - Pre-loaded with a variety of fonts, text sizes and colors - Manage your accounts through a simple tree System requirements: - Windows XP/Vista/7/8 - 2 GB RAM - 200 MB free disk space - Additional programs can be found here You like the idea but think there are still a couple of small bugs, so what can we do? We are open to ideas on how we can improve the software. Let me know what you think. We would also appreciate some support by using the feedback form.

Q: Check for a valid Date I need to check whether the passed parameter is a valid date. If it is a valid date then I need to set it as new Date(2007, 0, 1) else it should throw an error. How can I do that?

function someFunction(d) { // How to check if d is valid date and set it as new Date(2007, 0, 1) else throw an error } A: You can use momentjs and momentjs/locale, since your date is really a string you will need to convert it to a moment and format it as desired.

function someFunction(d) { // This is the best way I've found to get an object out of a string // var parsed = moment(d, 'MM/DD/YYYY'); // var date = parsed.format('YYYY-MM-DD'); if (!isNaN(date)) { new Date(date); } } You can see some more functions for parsing and manipulation on the documentation page.

A: A better way (but just a small change on your current function) is to use moment.js, and the moment.js/locale. It will help you to get a proper date from string

## Portable MesNews Crack

Convert urls into socks4/socks5 proxies & others - Use urls (http,https,ftp,irc,mailto,news,etc) in the form of or and you will have them proxified and connected over the net as though it was you visiting the website. ## Portable MesNews

- Portable MesNews is an intuitive application that offers a quick and easy way to check and read newsfeeds from your webpages, set multiple servers and groups, and send messages to your friends and acquaintances with ease. - Can be launched on the go As the name implies, the tool doesn't require any installation to run, which means it can be copied on external drives and started on any PC. The provided interface is clean and easy to learn, divided into the file tree, a message pane, and a basic web browser window. A nice touch is the option to customize the tree the way you see fit and enter more than one server and group. - Add your newsfeeds to keep yourself up-to-date To load the feeds, you first have to set the default settings, such as group name, organization, email and reply-to, along with ongoing email options (e.g. address, SMTP, port, username, password). - From there, you can also add a personalized signature and formulation, as well as pick the charsets. Creating a new server requires these settings, along with server address, local name, and authentication credentials. - Configure appearance and security properties In addition, you can manage incoming, received, and sent messages, filter them based on different criteria (name, subject, size, ID, IP), and choose the desired display method (marked, threads). From the preferences, the app lets you change the font, text size and colors, as well as customize program sounds and its layout. - In conclusion Taking everything into consideration, Portable MesNews is a user-friendly program that comes in handy when you want to check and read your newsfeeds with minimal effort, send and receive messages, and set up groups and servers. Since it's portable, the utility doesn't create new registry entries, nor leaves traces after it's been deleted. Application requires Java (JRE) 9. | B 7. E 4. V 4. M 2. D 1.
