TMap Designer allows you to create maps of your own at a moment's notice. Whether it be your town or country, you can build maps of it using TMap Designer. What is TMap Designer? TMap Designer is an app written in the Java programming language and can function on Windows, Mac OS X and Linux. The idea of TMap Designer is to allow users to create maps at a moment's notice, whether it be of their own town or country, or even their own area of interest, TMap Designer allows you to do so. What are TMap Designer Features? Within the app, users can design maps for themselves or for others. They can also be used to determine the area of interest that a user may have. Also with TMap Designer users can generate maps of other maps at a moment's notice. This means you can have a map of your town and even of your neighborhood and then generate a map of your town which shows you the buildings and other interesting aspects of your town. The user can also choose what type of map they want to design. There are many available map types, which include the following: - A simple map. - A colored map. - A real map with links to other maps. - An outline map. - And many more. If the user chooses a map with links, they will also be able to generate other links to maps that may interest them. Within the app there are plenty of tools available. Users can create a link to another map, a description of the map, a title, or even color a map of their own. The user can also add features such as trees, and landmarks to their maps. They can even mark other users' maps as 'favorite' and "pin" a map to the map. When designing a map, users can choose to include as much or as little detail as they like. For example, users can zoom in as much or as little as they like. They can choose to create a map using one of several predefined shapes. Users can choose to have a map with a link to a map. They can even have a map without a link. Some options available to users within TMap Designer include: - The ability to save a design as a JPEG image. - Designing for a window of a specific size, or even make the window automatically resize. - Changing the time between the generation of map. - Being able to
